

***2.3.1 Student centric methods, such as experiential learning, participative learning and problem solving methodologies are used for enhancing learning experiences***

Dr. JJMCOE has given more emphasis on various teaching strategies that include experiential/field learning, blended learning, participatory learning, and problem-solving approaches. These techniques assist students in transforming themselves for employment, entrepreneurship, or higher studies.

Blended learning includes NPTEL videos, YouTube videos, Online Certification courses, and online lectures conducted using Google meet/Microsoft Teams etc.

Experiential/Field learning includes hands-on Workshops, Industrial Internships/Trainings, Industrial visits, in plant training, Virtual Labs and seminars, etc.

Problem solving methodologies – Include Assignments/Tutorials, Projects, Quizzes, and Case Studies. Students are motivated to take-up real time industry problems and are made to give presentations on internships undergone. Case studies are included in many courses and help students to correlate the theoretical aspects with the practical situations. Students are encouraged to solve assignments to improve their problem-solving approach.

Participative Learning – includes organization and participation of students in technical events and acquiring course certifications. Students are encouraged to enroll in various lab-oriented MOOCs, organize technical events, participate in national-level technical events (Hackathon, DIPEX, TI Innovation challenge, Mitsubishi Cup, etc.), and are motivated to be part of Professional/Student Chapters.

## Learning Method and ICT tools used

Sr. No.	Learning method	ICT tool

## ADVANTAGES OF TUNNELING

Tunnels are more economical than open cuts beyond certain depths.  
 Tunnels avoid disturbing or interfering with surface life and traffic during construction.  
 Tunnels prove to be cheaper than bridges or open cuts to carry public utility services like water, sewer and gas.  
 If tunnels are provided with easy gradients, the cost of hauling is decreased.  
 In case of aerial warfare and bombing of cities, the tunnels would grant better protection as compared to bridges.

## TUNNEL SIZE AND SHAPE

- The size and shape of a tunnel depend upon the nature and type of ground it passes through and also on whether it is designed to carry a single or a double railway line.
- The shape of a tunnel should be such that the lining is able to resist the pressures exerted by the unsupported walls of the tunnel excavation.

## Advantages:

- Safety from external attack, bomb attack
- Transportation of public utility
- Fast mode of transportation
- Advance method to avoid settlement
- Pavement is not expose to atmosphere so wearing can be avoided

- If the ground is made up of solid rock, then the tunnel can be given any shape.

- Tunnels in rocky terrains are generally designed with a semicircular arch with vertical sidewalls.

- In the case of soft ground such as that consisting of soft clay or sand, the pressure from the sides and the top must be resisted

- **Definition-** Tunneling is defined as artificial passage, gallery, roadway which is constructed below the ground for the transportation of water, sewage, passengers, goods, gas etc.
- It is passage constructed without disturbing ground surface
- The methods involved in this type is tunnel driving.
- Tunnel is constructed through hills, below the ground, rivers etc.

## Disadvantages

- Time required is more
- Costly
- Pavement are start settling due to seepage of water
- Specialization equipment and supervision required

- **Circular** - best for resist external and internal forces, greater c/s area, Water and sewage
- **Elliptical** - Water and sewage mains
- **Eng. Shape** - For sewage, smaller c/s as bottom help to maintain self cleansing velocity in dry and storm flow
- **Segmental** - use for subway, navigation aids
- **Horseshoe** - Combination of arch or segmental and circular tunnel, Suitable for soft rock, used for Roads and railways
- **Arched roof with vertical walls** - Roads and railways
- **Polycentric cross section** - Roads and railways

### Different Shapes of the Tunnel

civiltechtz.blogspot.com

### Size of Tunnel-

Factors determining size of tunnel-

- Volume & type of traffic
- Size of clear opening required
- Thickness of using
- Drainage facility

### Properties of particular interest during geological investigation

- Orientation of rock
- Thickness of individual layer
- Mineralogical investigation
- Bond investigation
- Bulk density of rock
- Temp condition
- Rock for slide and other hazard possible
- Bearing and tensile strength of various rock

### • Selection of route for tunnel:

- Topography
- Easiness in securing right of way
- Ground condition
- Disposal of exhaust gas, ground water and muck

### Classification

- According to purpose
1. Trench tunnel
  2. Railway
  3. Highway
  4. Navigation
  5. Airway
  6. Pipeline
  7. Water supply
  8. Hydro-power
  9. Sewage
  10. Special for industrial use
- According to type of material
1. Hard rock
  2. Soft rock
  3. In-situ sand
  4. Under river sand
- According to position of alignment
1. Main Tunnel
  2. Spinal Tunnel
  3. Slop

### Horse shoe shaped

### Geological Investigation

- Topographically :-
- Ground water condition :-
- Permeability :-
- Structural constitution:-
- Liable to failure by sliding, creep or subsidence.
- Trend and rate of weathering :-
- In catchment area is of considerable importance

### Character of material

- **Hard Rock:**  
Have sufficient cohesion, stand vertically, help in determining lining is required or not  
Material- Granite, Feldspar, basalt
- **Soft Rock:**  
Supported by timber, cohesion is less, need strong lining.  
material – sand stone, laminated clay, volcanic rock
- **Very soft rock:**  
Material- Gravel, Sand, clay

## Shaft

- When length can small it can be constructed by excavation
- The vertical opening along alignment is shaft

## Purpose of shaft

- To start excavation from both side
- To provide adequate natural ventilation
- To remove excavated material
- To provide passage for construction tools, machinery
- To transfer centre line inside tunnel

## Drill & Blast Method

## Construction of shaft

- Drilling and blasting
- Mucking
- Timbering
- Pumping

Fig. 30.14 Tunnel shafts

## Drilling and blasting

- Number of holes are drilled into rock
- They are filled with explosive
- Detonating explosive causes the rock to collapse
- Rubble is removed and new tunnel is reinforced
- Repeating this step eventually create a tunnel

## Mucking

- The operation of loading broken rock by hand by machine drilling usually in shafts tunnel removed from tunnel, this process is known as mucking
- Muck- Is useless material produced in mining

Figure 4 Sketch showing the drilling of shaft after the completion

## Timbering

### SUPPORTING

- After initial mining, tunnel need supports for further processing.
- For the sake of life a perfect planning is needed for support.
- In ancient times timber and masonry were the main methods.
- Today support is provided by injecting final paper or building it completely before further tunnelling.

## Pilot tunnel

- Pilot tunnel is defined as tunnel constructed parallel to main tunnel and join to main tunnel by cross cut

## Methods

- Full face method
- Heading & benching
- Drift Method

## Advantages

- Area for storage of tools and material
- Reduced the cost as compared to shaft
- Passage for worker to carry out repair and maintenance
- Dangerous of falling of material can be avoided if pilot tunnel are used

## Full face method

- The method of attacking face will depend upon size and shape of tunnel, available equipment, type of rock, extent of timbering. Required
- Popular tunneling in hard rock
- It means whole face of tunnel is attack at same time
- This Method Conveniently Adopted For Tunnels Of Small Cross Section Area Through Stable And Self Supporting Rocks And Whole Section Or Full Section Attacked At A Time.

## Pumping

## Tunnel construction

- Hard rock:

While boring hard rocks, first workers dig a small hole on rock and place explosives in it. After detonating it, they remove the rock and repeat the same till it advance a little bit, and it's only then they start the operation using a TBM.

## Full face method

- At Present Techniques Shield And Tunnel Boring Machine (TBM) Are Popular And Well Suited For Full Face Excavation In Different Ground Condition And Various Shapes And Size.
- This Method Useful When Diameter Less Than 6 m And Face Area Less Than 19 m<sup>2</sup>
- As Further Increase In Diameter And Area Result In Difficult Construction And Costly.

## Advantages Of Full Face Method

- Similarly As Minimum Equipment's Required.
- Minimize The Total Magnitude Of Ground Disturbance And Settlement.
- Full Face Method Is Easily And Speedily Completion.
- In Full Face Method Mucking Track Laid Once For Full Operation.
- Full Face Method Is One Of The Methods Of Tunneling In Sack.

- **Advantages Of Heading And Benching Method**
- In This Method Drilling And Mucking Done Simultaneously.
- Less Quantity Of Explosive Required As Compared To Full Face Method.

- **Disadvantages Of Heading And Benching Method**
- In Heading And Benching Method Removal Of Muck From Heading Is Difficult.
- Heading And Benching Method Is One Of The Methods Of Tunneling In Rock.

- **Advantages Of Drift Method**
- A Small Preliminary Section For The Full Length Has Been Accurately Driven, Which Economies Construction.
- Elaborate Supporting Platforms Not Necessary For Drilling Operations.
- It Provides Good Ventilation For Workers.
- **Disadvantages Of Drift Method**
- The Enlarger Can Not Started Until Central Hole Constructed For Full Length.
- Mucking Tracks Required To Shift Frequently, Bench to Bench.
- This Method Extremely Costly.

## Heading And Benching Method

- This Method Involves The Drilling Of The Top Portion In Advance Of Bottom Portion.
- If Rack Is Hard And Self Supporting, Then Top Heading Advances Ahead By One Round Over The Bottom, So That Heading And Benching Follow Each Other.
- In One Blast One Heading And One Benching Are Blasted With Few Seconds Time Lag.
- Heading And Benching Method Suitable For Soft Rock Tunneling Of Medium And Average Size.
- It is used when tunnel section is very large and quality of rock is not satisfactory.

## Drift Method

- Drift Method Consist Drilling Small Sized Heading, Centrally At Top Or Bottom Of Face, Which Later Enlarged By Widening And Benching.
- This Method Suitable For Large Sized Tunnels In Difficult Or In Hard Rock.
- Top Drift Method Is Popular And Involves Operation Like, Boring And Blasting A Top Centre Of Drift - Widening And Enlarging The Drift - Benching In Stages

## METHODS OF TUNNELLING IN SOFT ROCK

- Following methods can be adopted for tunnelling in soft rock -
  - 1) Needle beam method
  - 2) Fore polling method
  - 3) Line plate method
  - 4) Shield method

## Heading And Benching Method

## Drift Method

## Fore polling method

- Frame in A shape prepared and placed near face of tunnel covered with plank
- Poles are inserted from top and continued to depth up to which easily taken up
- Tunneling operation carried out from ground

## Needle beam method

- Needle beam consist of stout timber beam or composite fletched beam and form main temporary support during excavation

## Shield method

- Stages for Shield tunneling
- Excavation
  - Material conveyed to mucking unit by belt conveyor
  - Assembly of primary lining formation of nodes in primary lining
  - Grouting through nodes
  - Advancing of shield in forward direction
  - Shield is removed

## 5. Tail/Rail portion

- It is backward most portion of the shield which can accommodate generator set, cement gun, compressor unit, welding set, primary lining provision

## Line plate METHOD

- In this timbering is replaced by pre stressed steel plate of standard sizes
- Advantage of this
  - It is light
  - Easy to handle
  - Larger than timber piece
  - Required less no. of joints
  - They are fire proof
  - Skilled by any labour

## 3. Propelling Jack/ Hydraulic Jack

- The series of powerful hydraulic jack is mounted inside of skin.
- This jack are used in pushing the shield forward as the excavation beings

## Safety measure

- Lighting and ventilation facility
- Soft strata support with quality material
- Good first aid facility should be provided with 1 doctor available at all time
- Explosives must be handle with care
- All tool and equipment kept in good working condition
- Open flames, electrical short circuit avoided
- Fire fighting services must be always kept ready
- Scaling (when blasting the material some material is loosened that material is hammered so as to check the loose material if any))

## Shield method

- It is used for soft rock
- Shield is movable frame which support the face of surface and ground immediately behind face
- The main component of shield are
  - 1.Skin- The outer envelope is usually circular in form consisting of steel plate. It should be sufficiently strong to prevent any deformation during excavation
  - 2.Cutting Edge- Mounted in front of skin which is made of cast steel pushed into the face and cuts the surface to required shape of tunnel by the cutting edge

## 4. Hood

- Hood is forward extension at the top which provides protection, the minor working in forward section hood are very much essential in soft soil (Gravel)

## Ventilation

- It is defined as supply of air and light considering no. of worker in tunnel
- Requirement-
  - Fume from blasting must be clear quickly
  - Prevention of accumulation of dangerous concentration of fumes
  - To provide atmosphere in which men can work comfortably and efficiently
  - Volume of air required depend on
    - Size of tunnel, amount of explosive use, frequency of blasting

# Natural & Artificial Ventilation

- Natural Ventilation-
- Artificial Ventilation-
- Blowing
- Exhausting/ Vacuum process
- Combine Blowing/ exhausting

## Tunnel Drainage

### LIGHTING OF TUNNELS

The situations which demand adequate light can be observations or tunnel, drilling & marking zones, bottoms of shaft, storage points, pumping shafts, underground repair shops.

The spacing of lights will depend on various factors such as tunnel dimensions, size of light source, nature of rock surface.

The common types of lights used in tunneling work are acetylene gas lighting, electric lighting & lanterns.

PROF. Dr. D. B. DESAI

Dr. J. J. MAGDUM COLLEGE OF  
ENGINEERING, JAYSHINGUR.

1100 TONNER DUMPER

EARTH MOVING EQUIPMENT

- TRACTOR
- DOZER
- EXCAVATING EQUIPMENT (SHOVEL)
- TRENCHING MACHINES
- SCRAPPER

Logos construction

TRACTOR

- Types/ Performance characteristics types
- 1. Crawler type
- 2. Wheel type

100 TONNER DUMPER

TYPES OF EQUIPMENT

- EXCAVATING
- HAULING
- HOISTING
- DRESSING
- CONVEYING
- DRILLING
- CRUSHING
- DEWATERING
- COMPRESSION

DOZER

## DOZER - EFFECTIVE VERSATILE EARTH MOVER

### DOZER

#### Applications

- Stripping
- Planing & side hill cut
- Ditching
- Backfilling
- Road & frozen ground clearing
- Spreading
- Blade to blade dozing

### DOZER

#### Types of Blade

1. S blade
2. A blade
3. U blade
4. C blade

## DOZER WITH RIPPER ATTACHMENT

### DOZER

#### Types of dozer

1. Bull dozer
2. Angle dozer

#### Blade types

1. Cable-operated
2. Hydraulically controlled

### DOZER

#### Factors affecting production rate (output)

- Blade type
- Type & condition of material
- Cycle time

### DOZER

- Used in following operations
- Clearing land of timber & stumps
  - Opening pilot roads
  - Moving earth for short haul distance
  - Helping tractor-pulled scraper
  - Spreading earth & rock fills
  - Backfilling trenches

### DOZER

#### Operational adjustments of blade

1. Tipping - one side fitting
2. Pitching - changing angle of attack
3. Angling - turning the blade

### DOZER

#### Production rate

$$\text{Production rate} = \frac{60}{\text{Cycle time in min}} \times \text{blade load}$$

## SHOVEL (Excavating Equipments)

1. Dipper: Shovel or power shovel
2. Back hoe or hoe
3. Dragline
4. Cam shell

Shovel

## CONSTRUCTION EQUIPMENT

- RISK INVOLVED
- HUGE RESOURCE INVESTMENT
- CONTINUITY OF WORK
- TRAINED OPERATORS
- LOSS OF VALUE
- CLIMATIC CONDITION
- URGENT MANAGEMENT OF INVENTORY
- EQUIPMENT SHOULD EARN FOR ITSELF AS WELL AS OWNER

## Dipper Shovel or power shovel

Techno economic factors affecting selection of size of power shovel (Bucket)

- Quantity of work
- Depreciation expenses
- Down time cost
- Cost of wages per cum.
- Ownership & operational expenses
- Cost of drilling, blasting & excavation
- Size of hauling unit
- Type of material

## CONSTRUCTION EQUIPMENT RISKS

- FINANCING MECHANISM
- CONSTRUCTION ACTIVITY LEVELS
- LABOUR REGULATIONS
- SAFETY
- TIME VALUE OF MONEY

## Power Shovel

## CONSTRUCTION EQUIPMENT

- DISTRESSED CONDITION
- STRINGENT LABOUR LAWS
- IDLE INVESTMENT OF CONTRACTOR
- CAN BE MINIMIZED

## EQUIPMENT PLANNING

- DIRECTLY LEADS TO PROFIT/LOSS
- PRODUCTIVITY
- VARIOUS COSTS ASSOCIATED
- ENGINEERING FUNDAMENTALS
- ACTUAL SITE CONDITIONS VIZ WATER TABLE, DEPTH OF CUTS, SITE DIMENSIONS

## EQUIPMENT PLANNING PROCESS

- REQUIRED FOR PRODUCTION ACHIEVEMENT
- COST CONTROL
- COMMITMENT
- CONSISTENCY
- COORDINATION

## STEPS IN EQUIPMENT PLANNING

- ANALYSE, ESTABLISH THE SCOPE AND FEASIBILITY AND LIMITATIONS W.R.T. TIME
- MONEY
- LOCATION
- COMPETITION FOR RESOURCES

## EQUIPMENT PLANNING

- COEFFICIENT OF TRACTION
- DRAWBAR PULL
- RIMPULL
- POWER OUTPUT AND TORQUE

## EQUIPMENT PLANNING

- PAYLOAD
- HAUL ROUTE
- TRAVEL DISTANCE
- BEARING CAPACITY
- ROLLING RESISTANCE- TRACK RESISTANCE
- SOFT SOIL HIGHER RESISTANCE
- SELECTION OF TIRES / GRABLERS

## EQUIPMENT PLANNING PROCESS

- REQUIRED FOR PRODUCTION ACHIEVEMENT
- COST CONTROL
- COMMITMENT
- CONSISTENCY
- COORDINATION

## STEPS IN EQUIPMENT PLANNING

- DIVIDE THE PROJECT IN SPECIFIC AND DISCRETE ACTIVITIES
- ESTIMATE TIME, RESOURCES COST FOR EACH ACTIVITY WHICH WILL HELP TO ESTIMATE TYPE, QUANTITY, DURATION OF EQUIPMENT
- DRAW NETWORK TO GET INTER RELATIONSHIP BETWEEN ACTIVITIES
- TIME FOR DELIVERY OF MATERIALS AND EQUIPMENT

## COST

- SECOND TO LABOUR COST IN TERMS OF UNCERTAINTY AND OUTCOME
- MEANS OF EMPLOYMENT
- PURCHASE
- LEASE
- RENTED

## EQUIPMENT TYPES

- STANDARD, COMMONLY AVAILABLE, READILY AVAILABLE SPARES, FLEXIBLE POTENTIAL PURCHASERS
- SPECIAL- SPECIALLY MANUFACTURED, LESS FLEXIBLE, DIFFICULT RESALE

## EQUIPMENT COSTS

- OWNERSHIP COST- CONTINUE WHETHER IN USE OR OTHERWISE
- INCLUDES DIRECT INVESTMENT
- INTEREST ON BORROWED SUM
- LOSS OF THE VALUE
- REGISTRATION / TAXES
- STORAGE
- MAJOR ALTERATIONS/ ADDITIONS

CADD Trainer,  
ACADD Centre,  
Thane West - 400601.

Dear Sir,

We are organizing an Expert Session on **Auto CAD 2D** for Second year B. Tech students on 3rd December 2022 to 11 December 2022 total duration is (30 hours) under Value Added Course.

We take this opportunity to invite you to chair a session for the same mentioned above.

We will be obliged to receive your consent for the same.

With warm regards,

Yours faithfully

Dear Sir,

I take the privilege to express my sincere thanks and appreciation for sparing your valuable time for chairing the expert session on **Auto CAD 2D** on 3<sup>rd</sup> December 2022 to 11<sup>th</sup> December 2022 total duration is (30 hours) under Value Added Course. Your suggestions and guidance enriched the students with your positive thoughts, knowledge and experience during the expert session.

Your cooperation will be solicited in our future endeavour.

With warm regards,

Yours faithfully

## Letter of Appreciation

To,  
**Mr. Anjaneya Puli**  
CADD Trainer,  
ACADD Centre,  
Thane, West -400601.

Dear Sir,

I take the privilege to express my sincere thanks and appreciation for sparing your valuable time for chairing the workshop on Rivet Software on 18th & 19th of May 2023. Your suggestions and guidance enriched the students with your positive thoughts, knowledge and experience during the workshop on REVIT Software from 18th - 20th May 2023 at JJMCOE premise.

Your cooperation will be solicited in our future endeavour.

With warm regards,

  
Prof. A. P. Chougule

Department of Civil Engineering  
has organised **VAC** for SY, TY and  
Final year B.Tech. students. The  
resource person is Mr. Anjaneya Puli,  
CADD Trainer, Mumbai. Well done  
Prof. Mrs. A.P. Chougule madam

20:09

From B. Tech civil

@Dr.J.J.Magdum college of  
engineering, jaysingpur.

On 18 may I attended the  
software workshop on civil  
engineering. It is very useful  
for me for life time period.  
The workshop is very good  
and Helpful for future career.

 Reply

Btech civil

It is very interesting session  
in May college.. And it's very  
cheep price for all this

courses..so it is affordable

for everyone person.. Thanku  
anjaneya Puli sir..

**Subject:-Permission to visit Metrological station**

Respected Sir,

Following are the bonafide students of this college studying in Third Year Civil (A & B Division).As an academic development; they need to visit Metrological Station. We are planning to visit on 8<sup>th</sup> December 2022.

We request you to grant the permission to visit and collect first hand information about various aspects. The information will be used for academic purpose only.

Thanking you, with regards.

Yours faithfully,

Dated: Aizawl, the 31<sup>st</sup> July, 2023.

This is to certify that Mr. Zorengpuia Liantluang, Roll No. 1, IV<sup>th</sup> Year student of B.Tech in Civil Engineering, J.J. Magdum College of Engineering has successfully completed an Internship Programme under the Government of Mizoram at Public Works Department, Office of the Superintending Engineer, Buildings & Other Department, Aizawl, Mizoram during 11<sup>th</sup> July, 2023 to 27<sup>th</sup> July, 2023.

He has successfully completed the following work during the internship period:-

1. Field training at Re-Construction of District Transport Office Building at Champhai.

During the training period he has excellent character with self-motivated attitude to learn new things. He has an excellent performance during the internship period.

We wish him all the best for his future endeavors.

*(Signature)*  
(HRANGTHANGA ZOTE)  
Superintending Engineer, PWD.,  
Other Department Circle,  
Mizoram: Aizawl.

## VAASTU CONSTRUCTION

**Govt. regd. Contractor, Engineer and Consultant**  
T-10, Third floor, Siddhivinayak Fortune, Opposite Hotel  
Pearl, Vijaynagar, Sangli 416416

---

Date :- 21/07/2023

### CERTIFICATE

This is to certify that *Mr. Sanket Sanjay Mane* Roll No. 12- Studying in BE (Civil) from Dr. J. J. Magdum College of engineering Jaysingpur of civil engineering has completed successfully field training work from our organization at **VAASTU CONSTRUCTION** From ( 06/07/2023) to ( 20/07/2023).

---

  
**Er. Rushank Ravindra Patil**  
Regd. Govt. Contractor

Dr. J. J. Magdum Trust's (No. E/902)

**Dr. J. J. Magdum College of Engineering, Jaysingpur**  
**Department of Civil Engineering**

Following are the final list of project with allocation of Project Guide for Academic Year 2022-23

Group No.	Roll No.	Name of Student	Project Title	Guide
1	4	Aditya D. Desai ✓	Construction site Inspection by using Drone or UAV	Dr. D.B.Desai
	3	Sneha R.Chhachwak ✓		
2	143	Suraj P. Tadse ✓	Use of Geosynthetic materials in road construction	Dr. D.B.Desai

## Department of Civil Engineering

### INVITATION

Date- 15/05/2023

To,

Dr A R Thorvat

HoD Civil and Environmental Engineering

KIT's COE Kolhapur

Respected Sir,

It gives us immense pleasure in inviting you for 'Expert Lecture- impact of jet' which is actively engaged in exposing Engineering Department of our college in co-curricular and extracurricular activities.

Expert lecture under your guidance will be an impulsive force for us. Hence we request you to please accept the invitation and oblige.

The Schedule of Function is as follows –

Date : 22 May, 2023. Day: Monday

Venue : Dr. J. J. Magdum College of Engineering

Jaysingpur. 416-101

Time : 9.40 a.m

Thanking you.

Yours faithfully,

  
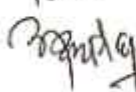

Prof. V A Patil

CESA & IEI Faculty Coordinator

  
Prof. Dr. J.S. Lambe

Head of Civil Engineering Dept,

Recd,  
  
22/05/2023

Dr. J. J. Magdum College of Engineering, Jaysingpur

Department of Civil Engineering

**Thanking letter**

Date- 22/05/2023

To,

Dr A R Thorvat

HoD Civil and Environmental Engineering

KIT's COE Kolhapur

Subject: - Thanks giving Letter

Dear Sir,

We express our sincere gratitude for coaching on Expert Lecture-  
Impact of jet on 22<sup>nd</sup> May, 2023 to all our students.

We hope to receive similar co-operation in future also.

Thanking you

Yours faithfully

  
Prof. V A Patil

CESA & IEI Faculty coordinator

  
Dr. J. S. Lambe

H.O.D, Civil Engg, Dept.

Received  
22/05/2023

Department of Civil Engineering

Organizing Expert Lecture on  
"IMPACT OF JET"

Monday, 22TH MAY 2023  
Timing:- 10.30 Am onwards

For  
Second year Civil Engineering Students

By  
**Dr A R Thorvat**  
HoD Civil and Environmental Engineering  
KIT's COE Kolhapur

Dr. Sunil Admuthé  
Campus Director

Dr. Mrs.S.B.Patil  
I/c Principal

Dr.J.S.Lambe  
Head of Civil Dept.

Prof. V.A.Patil  
CESA/ IEI Faculty Coordinator

.....Your Dream , Our Mission.....

# A Review on Enhancing Terms of Social Housing in Construction Industry

Mulla Shazi, M.A., Aqeeb Zakir I, Prof. Dr. D.B. Deral<sup>2</sup>

Department of Civil Engineering, College of Engineering, University of Diyala, Iraq  
Department of Civil Engineering, College of Engineering, University of Diyala, Iraq

**Abstract** - This paper includes systematic literature reviews on Enhancing terms of Social Housing in Construction Industry. For this, analyze the Production of affordable rental housing in urban areas then identify adequate sites which will be made available to facilitate and encourage the development of a variety of types of housing for all income levels. Assist in the development of adequate housing to meet the needs of low- and moderate-income households and conserve and improve the condition of the existing affordable housing stock, and to address and remark appropriate and legally possible remove government constraints to the maintenance, improvement, construction, and development of housing so, from this study suitable parameters can be recommended with respect to Indian construction industry.

**Key Words:** Social Housing, low-cost housing, neighborhood, social housing

## 1. INTRODUCTION:

Studies assessing the conditions of economical housings have mostly focused on satisfaction levels and subjective perception of quality particularly with regard to the dwelling units or the larger neighborhood characteristics. However, residents usually react upon their immediate environment to achieve satisfaction and make the surrounding area as their home. This paper relates appropriation, attachment and identity as home making mechanisms through. Which residents strive to achieve those satisfactions? Literatures are reviewed to identify the specific behavioral components of home making. A range of informative cues is found in forms of human activities and physical traces observable in economical housing.

The relationships between the physical environment and the social environment are explored in this paper. The paper also discusses the role of the physical environment in the formation of social identity and the role of social identity in the formation of place attachment.

been observed to explore the relationships of ground design and other aspects of housing. This is being done now to open which deal with effective budgeting and following of techniques which help in reducing the cost construction through the use of locally available materials along with improved JMI and technology without sacrificing the strength, performance and life of the structure. There is huge misconception that low cost housing is suitable for any circumstances. It is not they are constructed by utilizing cheap building materials of low quality. The fact is that Low-cost housing is done by proper management of resources. It is also achieved by postponing finishing works or eliminating them in phases.

The provision and management of social housing for those who are unable to access the housing market is essential to the maintenance of the fabric of society. Roughly 26 per cent of households in this country rely upon some form of subsidized housing provided by local authorities and housing associations, and many who would otherwise be homeless are housed in private sector accommodation procured by state and voluntary agencies. Yet others rely on housing benefits provided through tax receipts to help them afford the homes they rent. The social housing industry is vast and still growing, with an annual growth in the number of housing associations and management bodies, and is changing to adapt to new political and economic forces. There are very few countries in the world where some form of subsidized housing does not exist, and the total number of social houses is likely to grow six-fold, as are the challenges of the sector.

The environmental management of residential complexes in terms of environmental, social and economic sustainability can enable setting particular standards in design that should be followed in new projects to ensure increased site viability. Further, it is a developing discipline of professional practice, and it is essential that the design of residential complexes should be based on the principles of sustainability.

This paper discusses the role of the physical environment in the formation of social identity and the role of social identity in the formation of place attachment.

**Abstract:** Critical success factors (CSFs) are project management inputs that can lead to successful project implementation. It is a critical success factor of companies that must be identified in order for the project to be completed on time. The goal of this research is to determine the magnitude of the link between CSFs and project success. The research findings are supposed to aid the company in evaluating project management performance. Finally, the conceptual framework was created by identifying five factors that contribute to project success: Project Management Action, Project Procedures, Human Factors, External Factors, and Project Related Factors.  
**Keywords:** Critical Success Factors (CSFs), Project, Project management, Construction project implementation, Project managers.

## 1. INTRODUCTION

Over the life of a facility, a construction project is effectively completed as a result of many jobs and interactions, both planned and unexpected, with changing participants and procedures in a continually changing environment. Certain aspects are more important than others in project success. Critical success factors (CSFs) are a term used to describe these factors. Rockart (1982) coined the term "critical success factors" in the context of project management, and it is defined as those characteristics that contribute to project success (Sanvido et al. 1992). Any growing country's development and expansion is contingent on the successful implementation of new initiatives. After agriculture, the construction industry is India's second major source of employment. Because of the shifting uncertainties in technology, government funding, and development procedures, the building sector is progressive. Project performance is also used as an objective measure of project goals, such as completing the project on time, on budget, with good quality, and with complete client satisfaction. Project performance is based on time, cost, and quality, but these factors alone do not provide a whole picture of project success. There are also a lot of issues to consider, such as finishing the project on time and on budget, quality of workmanship, client and project management satisfaction, technological advancements, environmental friendliness, and safety. Identifying critical success elements, building conceptual frameworks, and analysing the linkages among critical success factors and the link between critical success factors and performance are some of the other things. Purchasing a piece of land, determining the project's marketing, developing the building programme and design, acquiring the appropriate public approvals and finance, building the structure, then leasing, managing, and eventually sell it are all part of the construction project development process.

## II. LITERATURE REVIEW

1. Critical success factors influencing performance of construction projects  
Sunesh Sudheer Babu et al state that the study of project success and the critical success factors (CSFs) is considered to be a means for improving the effectiveness of project. Performance can be assured by identifying and eliminating the factors that cause poor project outcomes. Thus, project managers need better understanding of critical success/failure factors and how to measure them. Also he recommends that this study is to systematically investigate the causes of project failure and how these can be prevented, managed, or controlled. Construction projects are frequently influenced by success factors which can help project manager reach their intended goals with great efficiency. Their aim is to investigate the critical factors leading to

# Use of Agricultural Material for Effective Industrial Noise Reduction in Textile Industries

**Abstract** Noise is unwanted sound of the major pollutant which causes noise pollution from being industrializing these days one of the major problem in textile industry these are different kind of machinery work requires sound reduction to improve the working condition. In this paper we present the latest research conducted to understand the use of agricultural material like Tola, Banana stem, Rice straw, Husk, Sugarcane bagasse, etc. in noise reduction. The material is effective in reducing the noise by using the principle of impedance tube system. An effective solution for industrial noise reduction is given. The paper also discusses the importance of noise reduction in textile industry and the need for noise reduction in textile industry. The study of noise reduction in textile industry is a growing concern and the use of agricultural material is an effective solution for noise reduction in textile industry.

**Key Words** - Banasa, Tola, Banana stem, Rice straw husk, Sugarcane bagasse, Impedance tube system, Noise Reduction coefficient (NRC), Impedance tube system.

## 1. INTRODUCTION

Noise is 'unwanted sound' one of the major pollutant as noxious gases in the environment which plays an important role in occurrence of annoyance, inconvenience and creating nuisance which causes Noise Pollution. As a result of industrialization, urbanization and population growth in the 21st century, noise pollution continues to grow in its extent and severity. Environmental noise pollution is a form of air pollution which has very adverse direct and cumulative effects on the health and degrades working, and living environments of wellbeing with corresponding real socio economic losses.

Noise pollution is an environmental problem all over the world, which has very harmful effects on health and life of the people who are exposed to continuous noise throughout the workday, may leads to some injuries such as hearing loss, weakness in nerves and pain in internal tissues, heart problems, and even higher blood pressure sustaining for long time. There is growing evidence that noise pollution is not merely an annoyance, like other forms of pollution, it has wide range of adverse health, social, and economic effects.

Noise pollution in its behavioural sense is very much complex phenomena because of insufficient knowledge about its effects on human being, but it is fact that noise pollution has widespread and imposes long-term consequences on health. The overwhelming worldwide sources of noise pollution are Transportation systems, Industrial Machines, Office Equipment, Power tools, Community, etc. There are some other important factors to take into account like duration of noise level parameter measured in decibels (dB) and the time spent on working day. The different types of noise sources direct the exposure, frequency, intensity and combination along nonworking day. The different types of noise sources direct the exposure associated with various kinds of noise exposure which are the most and dangerous impacts on the environment. However in most of the developing countries, noise pollution has been considered as the major pollution source, it is one of the major sources of noise pollution in urban and industrial centres.

The agricultural materials have become more lighter and more technologically advanced in nature, the concept of environment friendly materials has been developed. Agricultural waste like Tola, Banasa, Rice straw, Husk, Sugarcane bagasse, etc. are used as noise reduction material.

Groundwater potential and recharge zones mapping  
 with remote sensing and GIS for Kadegaon Taluka,  
 Maharashtra, India

Pratik S. Shinde, Dr. D.D. Desai, Dr. J.S. Lambre and Dr. Abhijit M. ...

**Abstract**  
 Groundwater is the most important source of water for drinking and irrigation. According to the study of recent years, the over-exploitation of groundwater has led to the depletion of the ground water table. This is due to the improper planning of the ground water development, results in the fall of water level, drying of wells, etc. The over-exploitation of ground water in certain parts of the country may also leads to the lowering of ground water table, and this requires the scientific resource management and conservation. The source of water available below the surface of earth can be used as the prime source of water for water supply system majorly for agriculture, and also used for domestic and commercial use. Groundwater has crucial importance and value for human life and economic development. The ground water has major contribution in the earth's water circulatory system known as hydrologic cycle. Keeping in mind the growing rate of the population and as result of it the needs of the society could not be satisfied by the available surface water resources. Thus the man has started massive search of water resources. Such massive mining of ground water has leads to drastic decline of ground water table. Thus the ground water has become the precious resources for the agriculture and domestic life. Hence in order to ensure a sensible use of ground water the proper evaluation and management is required.

**Keywords:** groundwater, precipitation, infiltration, groundwater level fluctuation etc.

**1. Introduction**

Geospatial technology is a quick and low-cost tool for producing valuable data on geology, geomorphology, lineaments, slope, and other topics that aid in determining groundwater potential zones. The systematic integration of these data with the advanced technology investigation allows for the rapid and cost-effective delineation of groundwater potential zones. Although it is possible to manually integrate these data and delineate groundwater potential zones, it is time-consuming, difficult, and introduces human error. In recent years, digital techniques have been used to integrate various data in order to delineate not only the groundwater potential zone but also to solve other groundwater-related problems. Using a geographic information system (GIS) software tool, these various data are prepared in the form of a thematic map. These thematic maps are then combined with the spatial analysis tool. The "spatial analysis" tool includes mathematical and Boolean operators, which are used to create a model based on the goal of the problem at hand. The model is used to generate groundwater potential zones.

# Developing Skills for Successful Leader

Prof. Dr. D.B. Desai<sup>1</sup>, Arijit Dasgupta<sup>2</sup>, Suchal Shrivastava<sup>3</sup>

<sup>1</sup>Associate Professor, Department of Civil Engineering & Dr. J.J. Magsam College of Engineering,

Mumbai, Department of Civil Engineering & Dr. J.J. Magsam College of Engineering,

Mumbai & Department of Computer Science and Engineering & Dr. J.J. Magsam College of Engineering,

**Abstract** – This study sought to determine whether different job functions and different levels of leadership ability. Because leadership skills can be learned and developed, this study compares them over other leadership constructs like leadership qualities. Leaders must inspire and exert influence over all stakeholders in order to be successful. This includes the board of directors, the shareholders, the staff, the vendors, and the clients. The goal of this study is to determine if there are any variations in the cognitive, interpersonal, and business leadership abilities of leaders in sales, finance, and human resources. Leadership involves creating and articulating a vision and inspiring others to want to work toward that vision. But leaders may not be skilled at or involved with the day-to-day management of the work needed to turn that vision into a reality.

**Key Words:** Leadership, Leader, Quality, Skill.

## 1. INTRODUCTION

The capacity to influence and direct followers or other members of an organization is referred to as leadership. Making wise — and occasionally challenging — decisions; defining and communicating a clear vision; setting realistic goals; and empowering subordinates with the information and resources they need to reach those goals are all aspects of leadership.

Transformational or charismatic leadership, and stakeholder interchange are just a few of the numerous theories that have been put forth over the years to describe the kinds of behaviors that make effective leadership possible. These theories all have a similar emphasis on specific behavioral patterns and how those patterns affect the effectiveness of leaders. Contrarily, leadership might be defined in terms of the capacities, expertise, and skills that make effective leadership feasible rather than in terms of particular actions.

Leaders may be found and developed in the workplace by giving them some autonomy in their decision-making. There are persons in every culture who only perform the duties that are expected of them. Then there are those that just innately step up and assume more accountability and initiative. These are the individuals that truly possess leadership potential.

## 2. Leadership Skills:

People with leadership qualities are able to direct and complete tasks, support initiatives, create a sense of unity, and empower others. A person's capacity to motivate staff, inspire them, instigate change, and produce outcomes are all examples of leadership capabilities. Employees need more than just leadership skills to become leaders. Their managers need to motivate and mentor them.

# LABOUR PRODUCTIVITY: A SURVEY

Dr. J. Mani, Lecturer in  
Surveying, Anna University  
Dr. J. Mani, Lecturer of Engineering  
Department, Anna University

Abstract—Construction involves huge investments and is associated with productivity. Productivity is one of the most important factors affecting the overall performance of any organization, which is true in small and the problems are directly associated with performance of labour. The performance of labour is affected by many factors and is usually linked to the performance of time, cost, and quality. Productivity is still a fascinating topic and a hot topic in the construction industry, promising cost savings and resource efficiency. In both developed and developing countries, productivity remains one of the most critical challenges. The developed world understands the relevance of economic development and social welfare. Developing countries that are dealing with unemployment, inflation, and resource scarcity try to make the best use of their resources in order to promote economic growth and better the lives of their population. The purpose of this thesis is to identify elements that affect labour productivity as well as to investigate reasons, such as labour problems on the job site and their impact on building projects.

Keywords—Labour, Productivity, Survey

## 1. INTRODUCTION

Inefficient management of the construction resources can lead to low productivity. This is why it is important that construction managers are knowledgeable about the various methods that can be used to evaluate the labor productivity of their workers. It is very important that construction projects have a good control over their productivity factors, as these contribute to their overall income. While the use of human resources that can be used to improve the efficiency of the project labour productivity is a particular area of interest. This can help managers make informed decisions and improve the performance of their company. The productivity of a company can be determined in many ways depending on the resources it has. For instance, a company can be determined by the amount of resources it uses to produce goods and services, which is a very difficult challenge because it is not easy to measure. The productivity of a company can be determined in many ways depending on the resources it has. 1. To identify and calculate the effective information needs of the project.
2. To identify and calculate the effective information needs of the project.

The term 'survey research' refers to the process of gathering information by asking people questions in order to collect data for this study, two fundamental methods were used: questionnaire and personal interviews. A questionnaire was chosen as the most efficient and appropriate data gathering method for the investigation. The questionnaire was judged to be a self-administered instrument with web-design questions, which was a suitable response. A questionnaire is a web-survey style, on the other hand, takes less time and costs less money for the researcher, while allowing respondents to respond at their leisure. However, as compared to face-to-face interviews, the response rate for this method is usually lower. Data was gathered through reviews of books, journals, papers, seminar conferences, and websites that focus on the importance of building construction. Small businesses in India are unable to meet labour demands due to a variety of reasons, one of which is to increase their productivity. The productivity of a company can be determined in many ways depending on the resources it has. For instance, a company can be determined by the amount of resources it uses to produce goods and services, which is a very difficult challenge because it is not easy to measure. # SLIP FORMWORK

Dr. J. J. Marim College of Engineering  
 Jayasagar, Maharashtra, India

Abstract— Slip forming is one of the most effective processes for constructing unconventional structures such as tall towers, chimneys, and silos, as well as railway and bridge construction. Formwork made using slip techniques used on a construction with a height more than 16 meters and its unique design. Technique is an erection that are both quick and cost-effective. Slip forming takes into account the fastest erection is 7.2 meters per day procedure. They have a variety of components, and when they're finished, they're ready to use. It was elevated up and further by the hydraulic jack at certain height concreting. It's possible to undertake some concreting. As a result, these methods are quick and efficient. Savings in cost, efficiency, and fewer workers are required.

Keywords— Formwork, Timber, Concrete;

## I. INTRODUCTION

Concrete is poured and cured into a temporary mould called formwork. Traditional formwork is made of wood, but it can also be made of metal, glass fibre reinforced polymers, and other materials. The term "slip form" refers to a construction procedure in which concrete is poured into a mould, poured over the top of a constantly moving formwork. As far as the concrete. When the concrete is poured, the formwork is elevated vertically at a rate that permits the concrete to settle. Before the concrete can be removed from the bottom formwork, it must harden. For projects with more than seven stories, such as skyscrapers, slip form is the most cost-effective option. Because it is the quickest form of vertical building, bridges and towers are used horizontally reinforced concrete construction, and it can also be employed for vertically reinforced concrete structures. For example, of structures. The concrete that will be used must be workable enough to be poured into the form and finished by vibration. The formwork must be strong enough to support the load with strength. The concrete must be placed in the form. The forms are elevated by jacking up the formwork. The formwork must be strong enough to support the load.

- The upper plate is supported by the hydraulic jack.
- Stable position.

Lower platform. This allows for steady movement.

The middle supports the position of the formwork. The other components, to work together, the middle supports the position of the formwork. The middle supports the position of the formwork. The middle supports the position of the formwork.

Fig 1- Slip Formwork

SEIP FORMWORK HISTORY: In 1940, American patented the slip forming technology for building silos, grain elevators, and cooling towers.

- In Skyline, the slip formwork process was used for the first time. The Niagara Falls Tower, which was constructed in 1965, is located near Niagara Falls, Ontario.
- For the Sheraton Waikiki, another remarkable structure was built. In 1969, a hotel in Hawaii was built.
- In the 1990s, slip forming was also used for paving. In the United Kingdom, includes the addition of slip forming to highways, bicycle paths, and kerby equipment for paving. Furthermore, slip form paving was used for paving highways and bridges.

Slip forming entails building a formwork structure that is approximately 100-150 cm high. The formwork is supported by a lower platform. The concrete is poured into the formwork. The formwork is then moved up as the concrete is poured. The concrete is then finished and cured. The slip forming process is used for building tall structures such as towers, chimneys, and silos.

# RECYCLING OF SEWAGE WATER FOR APARTMENT.

Dr. Pratik D. Desai  
Associate Professor  
Department of Civil Engineering  
Savitribi University, Kolhapur  
D. M. Shinde College of Engineering  
Bhamburda, Maharashtra, India

Abstract: Recycling of sewage water is most important part of the world. In most of the areas waste water is thrown off in river and sea without any treatment. This waste water contains many pollutant components that can be harmful for human health and environment. Due to wastewater natural resources of fresh water are polluted and aquatic life is in dangerous. Knowing the importance of water and avoiding the risk makes water treatment necessary for avoiding future problem. The purpose of this project is to prevent natural water sources and to treat wastewater coming from human activity and prevent environment and human health. So ultimate harmful component present into the wastewater using various method.

Keywords: Recycle, Sewage, Waste Water.

## 1. INTRODUCTION

### 1) Water

Water is a transparent, tasteless, odorless, and nearly colorless chemical substance, which is the main constituent of Earth's streams, lakes, and oceans, and the fluids of most living organisms. It is vital for all known forms of life, even though it provides no calories or organic nutrients. Its chemical formula is  $H_2O$ , meaning that each of its molecules contains one oxygen and two hydrogen atoms, connected by covalent bonds. Water is the name of the liquid state of  $H_2O$  at standard ambient temperature and pressure. It forms precipitation in the form of rain and snow in the form of fog. Clouds are formed from a suspended droplets of water and ice. In its solid state, when finely divided, crystalline ice may precipitate in the form of snow. The gaseous state of water is steam or water vapor. Water moves continually through the water cycle of evaporation, transpiration (evapotranspiration), condensation, precipitation, and runoff, usually reaching the sea. Water covers 71% of the Earth's surface, mostly in seas and oceans. Small portions of water occur as groundwater (1.7%), in the glaciers and the ice caps of Antarctica and Greenland. The rest of the water is present in clouds and in the long man requires water for day to day activities such as drinking, cooking, bathing, washing etc. Thus it is important to recycle water and avoid the risk of water pollution.

US a home being requires about 132 liters of water per day for its activity. About 80% of it is wasted, mainly about 108 liter per person is wasted. This Waste Water is generated from various activities such as bathing, washing, cleaning, etc.

### 2) Waste Water:

Waste water means polluted water which requires treatment before further use. The treatment may be physical, chemical, biological or combination of all. Household wastewater comprises of two types of wastewater as classified below. 1) Black Water: Wastewater from the toilet, containing fecal matter and urine is called black water. It is also referred to as sewage. 2) Grey water: Grey water is wastewater generated from the kitchen sink, clothes wash area, bathroom and other taps. Both grey and black water can be suitably treated and reused for non-potable applications. Generally waste water contains about 1-9% solid & 91-99% water. The current increase in production & disposal of this waste water has created problems. 3) RECYCLING & REUSE OF WASTE WATER: Approximately 80% of domestic water supplied is released as wastewater. In today's context of fresh water shortage, wastewater needs to be seen as a resource rather than as a waste. Wastewater can be recycled and reused for various applications such as for flushing and gardening. Grey water comprises 30-80% of domestic waste water and it is easier to treat and recycle than black water as the contamination levels in grey water are comparatively low. In any application, care needs to be taken to meet IS standards for water quality for the particular application. 4) TECHNOLOGIES FOR WASTEWATER TREATMENT: Besides the conventional

treatment systems such as sewage treatment plants (STP) and septic tanks, there are other alternative technologies which can be implemented at the level of a neighborhood or housing complex which recycle black and/or grey water for reuse. Such systems are called as decentralized wastewater treatment systems. In such systems, the raw sewage water is treated at local level without any treatment. The water contains many pollutant components which are not removed by conventional treatment. Such systems are called as decentralized wastewater treatment systems. For a long time, people have been using such systems for a long time.

The objective of this research is to propose a new innovative idea for the new generation construction site inspection. In the current digital era, the construction industry is facing a major problem, which is the shortage of human energy, time & cost. In order to overcome this problem, we are trying to develop the new generation Construction Site Inspection by using drone and AI. It is based on organized real-time data that is collected using a variety of cutting-edge instruments, such as drone, sensors, camera, and site photos, etc. The advanced software is used to analyze the data, enabling better operations, planning and monitoring.

**Keywords**— Construction Site, Inspection, Monitoring, Drone.

## 1. INTRODUCTION

Construction site inspection drone or unmanned aerial vehicle (UAV) is based on organized real-time data that is collected using a variety of cutting-edge tools, including sensors (photo/video camera, imaging camera, and more, etc.) A weekly, bi-weekly, or advance information in order of the construction of work progress, overall cost, and compliance monitoring for workplace safety, etc. It is necessary to obtain the high-resolution photos and videos. We are developed this system since the monitoring of large construction sites in the civil sector is the most labor-intensive, time-consuming, and expensive. There are many construction site inspection and monitoring systems that are available in the market.

Quality images and videos from various angles and views, allowing for a more comprehensive view of the site. Drones can capture high-resolution images and videos of the construction site from almost any angle. They can come 3D models and maps of the site. They can be used to track the progress of the construction and to identify any delays or issues. They can also capture information about the construction site, such as the location of the site, the type of construction, and the quality of the work. This information can be used to improve the construction process and to ensure that the project is completed on time and within budget.

The objective of this research is to propose a new innovative idea for the new generation construction site inspection. In the current digital era, the construction industry is facing a major problem, which is the shortage of human energy, time & cost. ## Groundwater potential and recharge zones mapping using remote sensing and GIS for Kadegaon Taluka, Maharashtra, India

Digvijay S Shinde, Dr. DD Desai, Dr. JS Lambe and Dr. Abhijit M Zende

DOI: <https://doi.org/10.22271/27078361.2022.3.1a.12>

### Abstract

Year by year the water is becoming the scare source all over the world. Water resources available on earth are in the two forms namely surface water and ground water. According to the study of scientist the total volume of the ground water is very less as compared to the total water available in the globe. There are many areas in our country that are facing scarcity of water, and this is due to the no proper planning of the ground water development, results in the fall of water levels, drying of wells, etc. The over exploration of ground water in certain parts of the country may also leads in the lowering of ground water table, and this requires the scientific resource management and conservation. The source of water available below the surface of earth and that can be used as the prime source of water for water supply system majorly for agriculture, and also used for domestic and commercial uses. Groundwater has crucial importance and value for human life and economic development. The ground water has major contribution in the earth's water circulatory system known as hydrologic cycle. Keeping in mind the growing rate of the population and as result of it the needs of the society could not be satisfied by the available surface water resources. Thus the man has started massive search of water resources. Such massive mining of ground water has leads to drastic decline of ground water table. Thus the ground water has become the precious resources for the agriculture and domestic use. Hence in order to ensure a sensible use of ground water the proper evaluation and management is required.

### 1. Introduction

Geospatial technology is a quick and low-cost tool for producing valuable data on geology, geomorphology, lineaments slope, and other topics that aid in determining groundwater potential zones. The systematic integration of these data with the subsequent hydrogeological investigation allows for the rapid and cost-effective delineation of groundwater potential zones. Although it is possible to visually integrate these data and delineate groundwater potential zones, it is time consuming, difficult, and introduces human error. In recent years, digital techniques have been used to integrate various data in order to delineate not only the groundwater potential zone but also to solve other groundwater-related problems. Using a geographical information system (GIS) software tool, these various data are prepared in the form of a thematic map. These thematic maps are then combined with the "Spatial Analyst" tool. The "Spatial Analyst" tool, which includes mathematical and Boolean operators, is then used to create a model based on the goal of the problem at hand, such as the delineation of groundwater potential zones.

In groundwater resource mapping and planning, integrated remote sensing and GIS can provide an appropriate platform for convergent analysis of diverse data sets. This work aims to develop a more efficient methodology for better understanding the groundwater potential of the Kadegaon Taluka of Maharashtra, India by combining the remote sensing data and GIS by analyzing multi-source remotely sensed data in a GIS environment. Since the study area is connected by a national highway, both industrial investment and population growth have increased, and as a result, water scarcity is gradually becoming the most damaging issue in such a region.

**Abstract**— The road networks in India span an extensive 59, 03,293 km, making them a crucial aspect of the country's infrastructure. To improve road construction methods, a project has been proposed to replace the conventional base course of Water Bound Macadam (WBM) roads with rubber and steel stacked mats. India generates over 1 million tonnes of rubber tire waste annually, with approximately 60% of it being recycled. Additionally, about 15 million tonnes of rubber tyre waste is produced in the country. The choice of rubber and steel for the mats is based on their desirable properties: rubber provides flexibility, while steel offers high strength to bear the load from the road surface.

The methodology involves creating the mats by combining rubber and steel back-to-back, with grooves at regular intervals for rolling. These prepared mats are then placed over the sub base course and rolled. To increase the soil's density and bearing capacity, holes are made in the mats, allowing soil particles to fill them when the mats are inserted into the ground. Fine courses are subsequently dumped and rolled over the mats. The mats used in this approach are easily transportable as they can be rolled up.

Moreover, by employing this mat system, the compaction period for the base course can be eliminated. It is important to note that this proposed methodology is specifically intended for Water Bound Macadam roads. By adopting this approach, the overall time required for road construction is reduced, waste tires are effectively recycled, and the overall project cost is minimized. The end result is an efficient road that can be constructed within a shorter timeframe.

**Abstract:** The use of plastic in bitumen will allow for the utilization of waste plastic materials it increase the quality of road in this cases plastic bitumen can reduce the overall cost of the project since plastic bitumen can increase the life of road & reduce the long term maintenance requirement it should provide long term cost saving to the agency when the proper use of plastic bitumen in construction of road. In this project we have to increase the concentration of plastic & to decrease concentration of bitumen by taking different concentration ratio of plastic & to decrease design the module of plastic bitumen blend which have all the standard properties of the regular bitumen by taking different test like flash fire point, penetration etc, on plastic bitumen blend.

**Keywords:** - plastic, bitumen, plastic bitumen blend

## I. INTRODUCTION

Plastic is everywhere in world. In every industry the plastic are used as a main component like packing material in building construction, in making toys etc. Also in automobile industry the plastic materials are widely used in all over the world. Now a days the plastic is widely used in a plastic bottles, used for mineral water packing, cold drinks storage, detergent storage etc. After use of that bottles for one time purpose they are thrown here and there. And that creates pollution. By using these plastic bottles in bitumen we can increase the strength of the road. If the plastic is added in proper proportion in to the bitumen the life span of road would be increase. It can save money and also protects the environment. In various countries the plastic is used in a road construction. The proper use of these materials can help for build a economical road. The maximum portion of plastic in plastic bitumen blend can help strong and durable road.

## II. OBJECTIVE

1. To reduce the quantity of bitumen and to increase the quantity of plastic in construction of flexible pavement.
2. To increase the life span of road
3. To reduce the overall cost of road
4. To test the bitumen and modify it.

“UTILIZATION OF PLASTIC WASTE IN PAVING BLOCKS”

**Abstract**—A large number of plastic wastes have been collected from several places such as tourist and public places etc., High density polyethylene bags are collected, cleaned, and used as a replacement for cement in the manufacturing of Paver Blocks. Plastic waste is available in large quantity and hence the cost factor comes down. when we having waste plastic then we can use as reuse, recycle and reduce. Be mindful of what you do, pay attention to the items you buy, and always check yourself to see if you need it or if it comes in a package with less waste

**Keywords**—Paver block, Plastic waste, Ceramic Waste, Compressive Strength

## INTRODUCTION

Plastic is evil. You can hardly do away with it. Every day we use plastic in daily lifestyle that is Garbage, coffee cup, electronic material, plastic bags Etc. so plastic is very harmful to humans, animals, marine and as well as to environment. But where is all the plastic going? It would be startling to note that billions of tons of plastic are ending up in the world's oceans. Pollution caused by plastic is not only harmful to marine life but is also affecting the health of humans. The harmful chemicals like PCBs, DDT, and PAH, which get absorbed in the plastic debris that floats in the seawater, have a varied and harmful range of chronic effects like endocrine disorders. The toxins are transferred in the food chain as they get absorbed in the animals' bodies after they eat the plastic pieces. Human beings consume these contaminated fish and mammals. Plastic pollution is affecting the global economy. It is destroying the fishing and aquaculture industries. Plastic is mostly produced by household, tourism and trekking etc. In many countries, the composition of Waste is different, that it is affected by the socioeconomic characters, waste management programs, and consumption patterns, but generally, the level of plastic in the waste composition is high. One of the largest components of plastic waste is polyethylene which is followed by polypropylene.

**Definition of Plastic**—Looking to the global issue of environmental pollution by post-consumer plastic waste, research efforts have been focused on consuming this waste on a massive scale in an efficient and environmentally friendly manner. Plastic contains in solid as well as in finished state.

**GENERATION** - In India generates 5.6 million metric tons of plastic waste annually, with Delhi generating the most of at municipality at 689.5 metric tons every day, according to a report from the Central Pollution Control Board (CPCB). CPCB submitted the report to the Indian Supreme Court, which said, "We are sitting on a plastic time bomb."

## ABSTRACT:

Based on the responses of experts, we find different cause of accidents in construction industry. And according to that we provide field-specific recommendations. It was also recommended to take accident prevention measures. The study focusses on to find different reasons of accidents and its impact construction project. Literature study shows accidents causes delay in project work. Proper safety need to be taken to avoid major harm due to accidents. Construction is most dangerous field than any other industry. So care should be taken to avoid accidents. At the end, recommendations for implementing an effective occupational health and safety management system in an organization are also provided. We studied all that causes and provide preventive measures so that project should be completed within time. And more profit should gain from project.

**KEYWORDS:** Causes of accidents, Construction projects, Preventive measures, Safety Precautions.

## I. INTRODUCTION:

The construction industry provides shelter for a variety of societies and for a variety of purposes. It provides employment for people. Construction is a more dangerous and risky sector than others. Due to the loss of accidents, the safety measures that it can provide, complete accidents were common than in any other industry. Accidents, minor accidents, and so on are all examples of accidents. As a result of the loss of life, injuries, and occupational illnesses, workplace accidents incur significant economic

costs. Accidents caused losses in the construction project, which impacted net income. As a result, it is critical to provide the budget for the construction site during the design phase.

## II. CAUSES OF ACCIDENTS

On the job site, there are many possible causes of accidents, and it is the site manager's or supervisor's duty to find these causes and effective solutions. As a result, we must identify these causes and implement control measures for them. In that, we find specific causes and, based on this, provide ranks for all causes as well as safety measures. Construction workers' mistakes, poor judgment, lack of focus, awareness of the risks involved with the task, and lack of safety regulations are other factors that contribute to accidents. Every construction and building site employee needs to be aware of safety regulations in order to increase their level of safety performance.

## III. LITERATURE STUDY:

S.L. Ting of the Hong Kong Polytechnic University's Department of Civil and Structural Engineering, located in Hung Hom, Kowloon, Hong Kong, conducted a study on the causes of accidents in construction projects. It was found that the most common cause of accidents was human error, followed by equipment failure and unsafe work practices. The study also found that accidents were more likely to occur on high-rise construction sites and in the early stages of a project. The study recommended that safety measures should be implemented to reduce the risk of accidents, such as providing safety training for workers, using safety equipment, and implementing safety protocols.

## ABSTRACT

The construction industry is an integral and developing part of nation's infrastructure and industrial growth. In that construction sector construction manager has to deal with lots of challenges regarding time management and its limitations. Primavera P6 is one of the software which is used for the management of construction activities. In this project, we carried out planning, scheduling, controlling, resource allocation and time management by primavera p6 software for mivan construction.

Primavera software has been use because of it use for large projects and gives comparable and optimum project plans to stimulate the adjustments. The wide acceptance of this software, especially in industries of developing cities has made the project managers to easily handle the large projects effectively. Effective time planning, is very important in determining the success of any project, poor planning and controlling of project will causes delay. To overcome this time running problem analysis can be done by using the primavera p6 software. This software gives better quality of construction management process and easily understanding results.

Key words: Mivan, primavera p6 software, planning, resource allocation, etc

## INTRODUCTION

Large construction project with huge budget it becomes very difficult for the project team to handle the task so it becomes very necessary to provide tool in hand of project team that keep track activities. It helps in planning, scheduling and controlling effectively. In today's world great importance is given to a speedy construction practices, so mivan technology is one of them. Primavera software is used to track and trace the activities of a G+7 mivan construction building.

**ABSTRACT**

In this paper, we have discussed about the problem of crack development in construction and what preventive measures should be taken along with the techniques to repair the cracks. Cracks in buildings and infrastructure pose a significant challenge in maintaining the structural integrity and durability. This abstract provides an overview of the causes, prevention measures, and repair techniques related to cracks in construction. Understanding the underlying factors that contribute to crack formation, implementing preventive strategies, and employing appropriate repair methods are essential for ensuring the long-term stability and safety of constructed assets. Cracking is a common problem in concrete structure in real life services. We all want to have a building which is structurally safe and beautiful but it is not so easy because of natural calamity, soil failure, construction faults and improper design causing to develop cracks on the building. So, it is important to understand the types of cracks and their causes and the preventive measures to be taken to control the cracks.

Key words: Cracks, Causes of cracking, Preventive measures, Techniques etc.

**INTRODUCTION**

Cracks in a building is a universal problem in the world. Cracks in construction are a common occurrence and can be found in various structures, ranging from buildings and bridges to roads and dams. They are a result of stress, movement, or settling within the construction materials, leading to the formation of visible openings or fractures on the surface. While some cracks may be minor and harmless others can indicate significant structural issues that require immediate attention and repair. Understanding the causes, types, and implications of cracks in construction is crucial for engineers, architects, contractors, and anyone involved in the building industry. By recognizing and addressing cracks early on, potential safety hazards and costly repairs can be minimized. The first and most common reason of cracks development is the stress such as dead load, live load, wind load and foundation settlement. Cracks affects the safety of structure and reduces the durability of structure. Cracks are generally divided into two parts. There are structural cracks and Non-structural cracks.

**Abstract**—This report focuses on prevention of landslide by slope stabilization. Landslides are a serious geological hazard caused when masses of rock, earth and debris flow down a steep slope during period intense rainfall. The western Ghat of India is subjected to many landslides every year. The material may move by falling, toppling, sliding, spreading, or flowing. Some landslides are rapid, occurring in seconds, whereas some may take hours. This report aims to stabilize the slope in the Jabbu hill region. We conducted various field tests and some lab tests on the sample collected from the site. From the results obtained we analyzed the data by using slide software to find stability of the slope. From the software analysis it is found that Reprofiling and Reprofiling plus soil nailing these two solutions for slope stabilization. The main purpose of this exercise is to achieve safety as well as economy at a same time for better prevention of landslides.

**Keywords** – Landslide, Slide software, Reprofiling, Soil Nailing.

**INTRODUCTION**

The study is about to provide various slope stabilization schemes for landslide prevention. Landslides causes the severe loss of life and economy. In recent years Maharashtra has witnessed various landslides like Malin village in Pune district, Taliye village in Ratnagiri district and many others. These landslides caused loss of lives of hundreds of people. These landslides mostly, occurred in rainy season because of additional water pressure. Hence rainy season becomes scary for various villages. To prevent these types of disasters we need a proper solution which should be economical as well. Government provides various preventive measures to these villages. Some villages get rehabilitated. Slope stabilization is done on tendering basis. Various consultancies provide a slope stabilization schemes for the different types of sites. Slope stabilization of landslide prone area can result in saving the lives of people. This motivated us to develop a slope stabilization design for a landslide prone area.

Biodegradable Material Management in Dr. J.J. Magdum College of Engineering, Jaysingpur

**Abstract**— Generation of Solid wastes in general and biodegradable waste in particular is increasing house hold level over the last two decades. Any material which can be decomposable by the action of microorganisms in a short period of time is called biodegradable. Mostly food waste, vegetable peels and fruit pulp are biodegradable. These materials readily mix with the soil by the action of bacteria. During decomposition, these materials release carbon dioxide, methane, ammonia and hydrogen sulphide into the environment thereby contributes to air pollution. Biodegradable kitchen waste that is collected from residential societies which can be utilized for the benefits of the society.

Biodegradable waste is the waste that can be decomposed and will be broken down into carbon dioxide, water, methane or simple organic molecules by the action of micro-organisms in reasonably less time. Normally biodegradable wastes are food and kitchen waste, manure, agricultural and forestry waste.

**Keywords**— Biodegradable waste, soil waste

## 1. INTRODUCTION

Due to scarcity of petroleum and coal it threatens supply of fuel throughout the world also problem of their combustion leads to research in different corners to get access the new sources of energy, like renewable energy resource. Solar energy, wind energy, different thermal and hydro source, of energy, biogas are all renewable energy resources. But biogas is distinct from other renewable energies because of its characteristics of using, controlling and collecting organic wastes and at the same time producing fertilizer and water for use in agriculture, irrigation. Biogas does not have any geographical limitations, nor does it require advanced technology for producing energy, also it is very simple to use and apply.

Deforestation is a very big problem in developing countries like India, most of the part depends on charcoal and fuelwood for fuel supply which results in deforestation. Also, due to deforestation it leads to decrease the fertility of land by soil erosion, soil salinization. Firewood as energy is also harmful for the health of the masses due to the smoke of it. Thus, it is an environmental pollution. We need an eco-friendly substitute for fuelwood.

Kitchen waste is one of the most abundant and easily available sources of organic matter. It is a rich source of nutrients and energy. In most of cities and places, kitchen waste is disposed in landfills or discarded in the public

# Investigation of COVID-19 Effect on Material Cost Used in Construction within Maharashtra State (India): Material Based Approach

Er. V.A. Paul, Mr. P.R. Shinde

Assistant Professor, Department of Civil Engineering, Dr.J.J. Masaram College of Engineering, Jaysingpur, India.

Lecturer, DKTE Society's Yashwantrao Chavan Polytechnic Ichalkaranji, India.

**Abstract:** Construction industry contributes majorly in world's economy, whereas it is highly influenced by availability as well as purchase cost of construction material. As per cost optimization is concerned, it is very important to evaluate the impact of corona epidemic on the construction industry in Maharashtra state (India). As long as the economy is considered contractors must check the rates of material used for construction activities & overall construction cost can be revised and kept in front of clients. Price escalation plays crucial role in such cases. Building materials as a replacement contributes 40-50 % of total cost of project. In this paper the factor which affects the cost of project is studied. This paper focuses on the market survey in Maharashtra state (India) to prepare the cost comparison statement of post corona and pre-corona stage.

**KEYWORDS:** Epidemic, Construction Industry, cost comparison statement

## I. INTRODUCTION

Various factors influence the cost estimation of a construction project. Preparation of a construction cost estimate for any project is a very complex process which consists of many variable factors. Every variable has to be correctly estimated based on proper study, past experience and research to calculate total project cost of construction. Many researchers worked on the precautionary measures on construction site, theoretical and explanatory research sharing the workforce issue [1]. This paper shed light on the price escalation in construction industry and relatively the increased rate of production of a building; in short, the expenses on material purchase will be studied and compared for concluding the effect on production cost of building at Maharashtra state.

## II. OBJECTIVES

1. To identify the factors affecting construction cost of project
2. Investigate the market rates on construction site before and after corona
3. To compare the project cost considering the material price only

## III. LITERATURE REVIEW

1. Ihsan Ali Huzien, 2021 COVID-19: Key global impacts on the construction industry and proposed coping strategies, *E3S Web of Conferences* 263, 05056, pp 2-4  
 The author states that supply of construction material and delay of project occurred due to Covid-19. Shortage of imported construction material affected all over the world. All the parties who participated in project have to undergo financial consequences for through the completion of work.

2. Apurva Panidimukkala, 2021, Impact of Covid-19 on field and office workforce in construction industry, (<http://icaitcongress.com/venues/ny-n-s/14.00>), Project Leadership and Society 2, ppno 2 August 2021, 2866-2875

The author states, due to material cost and delivery time issues, fuel and operation expenses have increased during the pandemic, cash flow delays became a major issue and negatively affected the delivery of materials, slower productivity, delayed project progress, and sometimes even led to projects being suspended.

**Abstract**— The road networks in India span an extensive 59, 03,293 km, making them a crucial aspect of the country's infrastructure. To improve road construction methods, a project has been proposed to replace the conventional base course of Water Bound Macadam (WBM) roads with rubber and steel stacked mats. India generates over 1 million tonnes of rubber tyre waste annually, with approximately 60% of it being recycled. Additionally, about 15 million tonnes of rubber tyre waste is produced in the country. The choice of rubber and steel for the mats is based on their desirable properties: rubber provides flexibility, while steel offers high strength to bear the load from the road surface.

The methodology involves creating the mats by combining rubber and steel back-to-back, with grooves at regular intervals for rolling. These prepared mats are then placed over the sub base course and rolled. To increase the soil's density and bearing capacity, holes are made in the mats, allowing soil particles to fill them when the mats are inserted into the ground. Fine courses are subsequently dumped and rolled over the mats. The mats used in this approach are easily transportable as they can be rolled up. Moreover, by employing this mat system, the compaction period for the base course can be eliminated. It is important to note that this proposed methodology is specifically intended for Water Bound Macadam roads. By adopting this approach, the overall time required for road construction is reduced, waste tires are effectively recycled, and the overall project cost is minimized. The end result is an efficient road that can be constructed within a shorter timeframe.

**Abstract:** The use of plastic in bitumen will allow for the utilization of waste plastic materials to increase the quality of road. In this cases plastic bitumen can reduce the overall cost of the project since plastic bitumen can increase the life of road & reduce the long term maintenance requirement it should provide long term cost saving to the agency when the proper use of plastic bitumen in construction of road. In this project we have to increase the concentration of plastic & to decrease concentration of bitumen by taking different concentration ratio of plastic & bitumen. We have to design the module of plastic bitumen blend which have all the standard properties of the regular bitumen by taking different test like flash fire point, penetration etc, on plastic bitumen blend.

**Keywords:** - plastic, bitumen, plastic bitumen blend

### I. INTRODUCTION

Plastic is everywhere in world. In every industry the plastic are used as a main component like packing material in building construction, in making toys etc. Also in automobile industry the plastic materials are widely used in all over the world. Now a days the plastic is widely used in a plastic bottles, used for mineral water packing, cold drinks storage, detergent storage etc. After use of that bottles for one time purpose they are thrown here and there. And that creates pollution. By using these plastic bottles in bitumen we can increase the strength of the road. If the plastic is added in proper proportion in to the bitumen the life span of road would be increase. It can save money and also protects the environment. In various countries the plastic is used in a road construction. The proper use of these materials can help for build a economical road. The maximum proportion of plastic in plastic bitumen blend can help strong and durable road.

### II. OBJECTIVES

1. To reduce the quantity of bituminous and to increase the quantity of plastic in construction of flexible pavement.
2. To increase the life span of road.
3. To reduce the overall cost of road.
4. To test the bitumen and modified blend.

**Abstract**—A large number of plastic wastes have been collected from several places such as tourist and public places etc., High density polyethylene bags are collected, cleaned, and used as a replacement for cement in the manufacturing of Paver Blocks. Plastic waste is available in large quantity and hence the cost factor comes down, when we having waste plastic then we can use as reuse, recycle and reduce. Be mindful of what you do, pay attention to the items you buy, and always check yourself to see if you need it or if it comes in a package with less waste

**Keywords**—Paver block, Plastic waste, Ceramic Waste, Compressive Strength

## INTRODUCTION

Plastic is evil. You can hardly do away with it. Every day we use plastic in daily lifestyle that is Garbage, coffee cup, electronic material, plastic bags Etc. so plastic is very harmful to humans, animals, marine and as well as to environment. But where is all the plastic going? It would be startling to note that billions of tons of plastic are ending up in the world's oceans. Pollution caused by plastic is not only harmful to marine life but is also affecting the health of humans. The harmful chemicals like PCBs, DDT, and PAH, which get absorbed in the plastic debris that floats in the seawater, have a varied and harmful range of chronic effects like endocrine disorders. The toxins are transferred in the food chain as they get absorbed in the animals' bodies after they eat the plastic pieces. Human beings consume these contaminated fish and mammals. Plastic pollution is affecting the global economy. It is destroying the fishing and aquaculture industries. Plastic is mostly produced by household, tourism and trekking etc. In many countries, the composition of Waste is different, that it is affected by the socioeconomic characters, waste management programs, and consumption patterns, but generally, the level of plastic in the waste composition is high. One of the largest components of plastic waste is polyethylene which is followed by polypropylene.

Definition of Plastic-Looking to the global issue of environmental pollution by post-consumer plastic waste, research efforts have been focused on consuming this waste on a massive scale in an efficient and environmentally friendly manner. Plastic contains in solid as well as in finished state.

**GENERATION** - India generates 16 million metric tons of plastic waste annually, with Delhi generating the most of at municipality of 689.5 metric tons every day, according to a report from the Central Pollution Control Board (CPCB). CPCB submitted the report to the Indian Supreme Court, which said, "We are sitting on a plastic time bomb."

## ABSTRACT

In this paper, we have discussed about the problem of crack development in construction and what preventive measures should be taken along with the techniques to repair the cracks. Cracks in construction pose a significant challenge in maintaining the structural integrity and durability of buildings and infrastructure. This abstract provides an overview of the causes, prevention measures, and repair techniques related to cracks in construction. Understanding the underlying factors that contribute to crack formation, implementing preventive strategies, and employing appropriate repair methods are essential for ensuring the long-term stability and safety of constructed assets. Cracking is a common problem in concrete structure in real life services. We all want to have a building which structurally safe and beautiful but it is not so easy because of natural calamity, soil failure, construction faults and improper design causing to develop cracks on the building. So, it is important to understand the types of cracks and their causes and the preventive measures to be taken to control the cracks.

**Key words:** Cracks, Causes of cracking, Preventive measures, Techniques etc.

## INTRODUCTION

Cracks in a building is a universal problem in the world. Cracks in construction are a common occurrence and can be found in various structures, ranging from buildings and bridges to roads and dams. They are a result of stress, movement, or settling within the construction materials, leading to the formation of visible openings or fractures on the surface. While some cracks may be minor and harmless, others can indicate significant structural issues that require immediate attention and repair. Understanding the causes, types, and implications of cracks in construction is crucial for engineers, architects, contractors, and anyone involved in the building industry. By recognizing and addressing cracks early on, potential safety hazards and costly repairs can be minimized. The first and most common reason of cracks development is the stress such as dead load, live load, wind load and foundation settlement. Cracks affects the safety of structure and reduces the durability of structure. Cracks are generally divided into two parts. There are structural cracks and Non-structural cracks.

ABSTRACT

The construction industry is an integral and developing part of nation's infrastructure and industrial growth. In this construction sector, construction manager has to deal with lots of challenges requiring time management and its limitations. Primavera P6 is one of the software which is used for the management of construction activities. In this project, we carried out planning, scheduling, controlling, resource allocation and time management by Primavera P6 software for mivan construction.

Primavera software has been use because of it use for large projects and gives comparable and accurate project plans to stipulate the adjustments. The wide acceptance of this software, especially in industries of developing countries has made the project managers to easily handle the large projects effectively. Efficient time planning is very important in determining the success of any project, poor planning and controlling of project will cause delay. To overcome this time running problem analysis can be done by using the Primavera P6 software. This software gives better quality of construction management and successfully understanding results.

Keywords: Primavera P6 Software, Primavera P6 Software, Primavera P6 Software, Primavera P6 Software, Primavera P6 Software

INTRODUCTION

Managing a construction project with large budget is becoming very difficult for the project team because of the large amount of work to be done. It is necessary to provide a good team that keeps track of activities. It is important to schedule and control activities effectively. In today's world, great opportunities are waiting for the most sophisticated people. The use of Primavera P6 software in the construction industry is increasing day by day.

**Abstract**—This report focuses on prevention of landslide by slope stabilization. Landslides are a serious geological hazard caused when masses of rock, earth and debris flow down a steep slope during period intense rainfall. The western Ghat of India is subjected to many landslides every year. The material may move by falling, toppling, sliding, spreading, or flowing. Some landslides are rapid: occurring in seconds, whereas some may take hours. This report aims to stabilize the slope in Jotiba hill region. We conducted various field tests and some lab tests on the sample collected from the site. From the results obtained we analyzed the data by using slide software to find stability of the slope. From the software analysis it is found that Reprofilng and Reprofilng plus soil nailing these two solutions for slope stabilization. The main purpose of this exercise is to achieve safety as well as economy at a same time for better prevention of landslides.

**Keywords**—Landslide, Slide software, Reprofilng, Soil Nailing.

### INTRODUCTION

The study is about to provide various slope stabilization schemes for landslide prevention. Landslides causes the severe loss of life and economy. In recent years Maharashtra has witnessed various landslides like Malin village in Pune district, Talive village in Raigadh district and many others. These landslides caused loss of lives of hundreds of people. These landslides mostly occurred in rainy season because of additional water pressure. Hence rainy season becomes scary for various villages. To prevent these types of disasters we need a proper solution which should be economical as well. Government provides various preventive measures to these villages. Some villages get rehabilitated. Slope stabilization is done on temporary basis. Various consultancies provide a slope stabilization schemes for these types of sites. Slope stabilization of landslide prone area can result in saving the lives of people. This motivated us to develop a slope stabilization design for landslide prone area.

**Stream Dissection Index**

The elevation difference between a morphological feature and those around it, such as the height difference between a peak and nearby peaks or between a depression and nearby depressions, is known as stream relief or relief (also known as elevation). (Wei and 2020 info). The height difference between the highest and lowest points (the largest difference in height between two points) in a basin or area is known as the "amplitude of relief" or "local relief" within that basin or area. This study computes watershed values using SRTM data.

**Dissection Index**

The dissection index, which always ranges between zero (no dissection) and one (vertical cliff or sea shore), is defined as the ratio between a basin's relative relief and absolute relief. Landscape dissection is one of the variables that affects drainage density (Montgomery and Dietrich, 1994). The dissection index value rises during the landform development cycle as a result of differential cutting of the once smooth land surface. (Dayama, 2022) This suggests that more dissection takes place as a result of the imperfections, leading to a plain surface.

**Relief Ratio (Rh)**

Total relief of the river basin is the distance from a watershed's highest point to its lowest point. According to (Schumm, 1956) the relief ratio is the ratio of a basin's overall relief to its longest dimension perpendicular to its main drainage line. The value of this research area is 5.19.

**Ruggedness Number (RN)**

The sum of drainage density and basin relief produces ruggedness number. (Strahler's 1968). The length of the slope and its steepness are combined. These estimations give the Dudhganga watershed a Ruggedness number of 1.16. (Dayama, 2022) Low ruggedness watersheds have inherent structural complexity in respect to relief and drainage density and are less prone to soil erosion.

**Maximum Elevation**

The basin's greatest height is defined as the watershed's highest point. In accordance with GIS software, it is 951 meters. (Dayama, 2022)

**Elevation at Outlet**

The watershed's outlet or the lowest point in Elevation is where the basin meets the sea. (Dayama, 2022) It is calculated using the GIS programmer, and the result is 410m.

**Abstract**— Generation of Solid wastes in general and biodegradable waste in particular is increasing at house hold level over the last two decades. Any material which can be decomposable by the action of microorganisms in a short period of time is called biodegradable. Mostly food waste, vegetable peels and fruit pulp are biodegradable. These materials readily mix with the soil by the action of bacteria. During decomposition, these materials release carbon dioxide, methane, ammonia and hydrogen sulphide into the environment thereby contributes to air pollution. Biodegradable kitchen waste that is collected from residential societies which can be utilized for the benefits of the society.

Biodegradable waste is the waste that can be decomposed and will be broken down into carbon dioxide, water, methane or simple organic molecules by the action of micro-organisms in reasonably less time. Normally biodegradable wastes are food and kitchen waste, manure, agricultural and forestry waste.

**Keywords**— Biodegradable waste, solid waste

### 1. INTRODUCTION

Due to scarcity of petroleum and coal, it threatens supply of fuel throughout the world also problem of their combustion leads to research in different corners to get access the new sources of energy, like renewable energy resources. Solar energy, wind energy, different thermal and hydro sources of energy, biogas are all renewable energy resources. But biogas is distinct from other renewable energies because of its characteristics of using, controlling and collecting organic wastes and at the same time producing fertilizer and water for use in agricultural irrigation. Biogas does not have any geographical limitations, nor does it require advanced technology for producing energy, also it is very simple to use and install.

Deforestation is a very big problem in developing countries like India, most of the part depends on charcoal and fuelwoods, for the energy which requires cutting of forest. Also, due to deforestation a large amount of soil is lost, which is very harmful to the environment. The loss of forest also causes the loss of habitat for many species of animals and plants, which are very important for the ecological balance.

Kitchen waste is organic waste, has high calorific value and nutrient content so it is that's why efficiency of methane production can be increased by several order of magnitude as solid earlier. It means higher efficiency and size of reactor and cost of biogas production is reduced. Now in most of cities and places kitchen waste is disposed in landfill or discarded which causes the problem

Engineering Mathematics III (Tutorial)

Tutorial Questions

1. If  $u = e^x + x \cos y + y \sin y$  then determine whether  $u$  is harmonic & if it is harmonic & find corresponding analytic function Find the curve of the best fit of the type  $y = acbx$  to the following data by the method of least square.

$$x = 1, 5, 7, 9, 12$$

$$y = 10, 15, 12, 15, 21$$

2. For a certain data the regression equation are  $3x+2y=26$  and  $6x+y=31$ . Find  $x, y$ , and  $r$ .
3. Find the best fitting of the type  $y = axb$  to the following data

$$x = 1, 2, 3, 4, 5, 6$$

$$y = 2, 16, 54, 128, 250, 432$$

4. Assume that on the average one telephone number out of 15 called 2 p.m. and 3 p.m. on week days is busy. What is the probability that if 6 randomly selected telephone numbers are called (i) not more than 3 (ii) at

least 3 of them will be busy

---

5. If the probability that an individual suffers a bad reaction from a certain injection is 0.001, determine the probability that out of 2000 individuals

(i) exactly 3 (ii) more than 2 will suffer a bad reaction

15. In an intelligence test administered on 1000 children the average was 42 and

S.D. was 24 Find the number of children exceeding a score 50 and Number of children lying between 30 and 40

16. In a large institution 2.28% of employees receive income below Rs.4500

P.M. and 15.87% of employees receive income above Rs 7500P.M. Assuming that the income follows normal distribution. Find the mean and S.D. of the distribution

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
Department of Civil Engineering

17. The overall percentage of failures in a certain examination is 20. If six candidates appear in the examination, what is the probability that at least five pass the examination?
18. Assume that on the average one telephone number out of 15 called 2 p.m. and 3 p.m. on week days is busy. What is the probability that if 6 randomly selected telephone numbers are called (i) not more than 3 (ii) at least 3 of them will be busy
19. Evaluate  $\int_0^{\pi} e^{-3t} t \cos t \, dt$
20. If  $u = e^x (x \cos y - y \sin y)$  then determine whether u is harmonic & if it is harmonic & find corresponding analytic function.

### Design of Steel Structure (Assignment )

#### Assignment Questions

1. Differentiate between working stress methods & limit state method.
2. Plate bracket carrying a load of 150kN at an eccentricity of 100mm is connected to the flange of steel I-section. Determine size of fillet weld. The depth of bracket is 300mm at member face . The weld is applied on both the sides of bracket.
3. Design welded connection for an angle 75 x 75 x 8 carrying an axial tensile load of 100Kn connected to one side of gusset plate 8mm thick.
4. Design a bolted bracket connection to support an end reaction of 400kN because of the factored loads supported by the beam. The eccentricity of the end reaction is shown in the figure. The steel used is of grade Fe410. Use bolts of grade 4.6. The thickness of bracket plate may be taken as 10mm

5. Design a tension member to carry factored load of 500kN by LSM consisting of pair of unequal angles back to back connected to opposite side of gusset plate by weld. Design connections & draw neat sketch.
6. Explain step by step procedure to be followed in the design of tension member.
7. Find out design strength of angle 100 x 100 x 10 connected to gusset plate 12mm thick through 100mm long leg using M20 bolt of class 4.6. The yield & ultimate strength of steel are E250 & 420MPa.
8. Explain step by step procedure to be followed in the design of Compression member

Dr.J.J.Magdum Trust's  
**Dr.J.J.Magdum College of Engineering, Jaysingpur**  
**Department of Civil Engineering**

9. Calculate safe compressive load carrying capacity of double angle discontinuous strut composed of 2ISA 80 x 50 x 6 with long leg connected back to back on either side of gusset plate 10mm thick. The length of strut between c/c of intersection is 3m & tacking done.
  10. Design a single unequal angle strut to carry a load of 90 kN. The angle is connected by its longer leg to 8 mm thick gusset plate. The effective length of the member is 2.5 m. Also design the plate bolted end connections.
  11. Design the base for column carrying compressive load 500kN with an eccentricity of 30mm from column centre line along minor axis (y-y axis). The section of column is 300 ISHB. Draw neat sketch showing all connection details work out in design.
  12. What are the types of column bases provided for steel structures?
  13. Design a column to carry axial compression of 1400kN & having a length of 6m. It is effectively held in position at both ends, but restrained against rotation. Design built-up section by using two channel sections.
  14. Design a slab base for a steel column ISMB 350 having width of flange 250 mm and carrying an axial compressive load of 1000 kN. If permissible compressive stress in concrete is 4 MPa & permissible bending stress in base plate is 185 MPa. Take bearing capacity of soil = 300kN/m<sup>2</sup>.
  15. Design a suitable moment resisting base for a column subjected to an axial load of 360 kN and moment of 130 kNm. The column section is ISHB 400 @ 822 N/m. Safe bearing pressure in concrete is 4000kN/m<sup>2</sup>.
  16. Differentiate between Laterally restrained beam & Laterally unrestrained with neat sketch.
- 
17. Design laterally restrained beam having effective span of 4m subjected to UDL of 15kN/m including self-weight & point load 10kN at mid-point vertically downwards. Take check for deflection & shear.
  18. Design laterally restrained beam having effective span of 4m subjected to UDL of 10kN/m including self-weight & point load 20kN at mid-point vertically downwards. Take check for deflection & shear.
  19. The roof of a hall of 12m x 8m consists of a RC slab 100mm thick. And a 50mm floor finish. The slab is supported on steel beams spaced at 3m Centre to center. The live load on the slab is 2kN/sqm. Design an intermediate steel beam I section. Assume that the slab provides adequate lateral restraint to the compression flange of the steel beam.

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
**Department of Civil Engineering**

20. Draw the neat sketch of crane system with all components.
21. Design a simply supported gantry girder of 6m effective span to carry two cranes of the capacity of 100kn each working in tandem. The weight of each crane excluding the crab is 150KN and weight of each crab is 20KN. The weight of the rail is 300N/m. The minimum approach of the crane hook is 1.0m. The wheel base is 3.8m. The height of rail is 75mm. Assume that the gantry girder is laterally unsupported. The expected number of stress cycles =  $2 \times 10^6$ .

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
Department of Civil Engineering

**Tutorial Question (Earthquake Engineering )**

1. Discuss the behavior of the following masonry walls in seismic regions. (i) Unreinforced masonry wall(ii) Reinforced Masonry wall(iii) Infill masonry wall.
2. Draw the detailed sketch of (i) Different ways of beam jacketing as IS code and(ii) Placing of vertical bars and closed ties in columns as per IS code.
3. With detail sketch explain the essential requirements to ensure box action in a masonry building
4. Explain failures of masonry structures observed in past earthquakes & how will you improve performance of masonry building.
5. Earthquake resisting features of unreinforced brick masonry structure
6. What is jacketing? Explain the jacketing of beams and column with Illustrative sketches
7. Define RC band? At what level in a masonry building would you provide them? Why?
8. Write a brief note on strengthening of masonry walls?
9. Describe briefly with neat sketches: 1)Stud Wall Construction 2)Timber Shear Panel Construction
10. Describe the construction procedure and precautions to be taken for brick- nogged timber frame construction
11. What is the influence of opening in masonrybuilding?
12. Differentiate (i) Seismograph Vs Seismogram (ii) S wave & Love wave (iii) center of mass & center of stiffness
13. An earthquake causes an average of 2.6 m strike-slip displacement over a 75 km long, 22 km deep portion of a transformed fault. Assuming the average rupture strength along the fault as 180 KPa, estimate the seismic moment and moment magnitude of the earthquake
14. Differentiate (i) Scismograph Vs Scismogram (ii) S wave & Love wave (iii) center of mass & center of stiffness
15. An earthquake causes an average of 2.6 m strike-slip displacement over a 75 km long, 22 km deep portion of a transformed fault. Assuming the average rupture strength along the fault as 180 KPa, estimate the seismic moment and moment magnitude of the earthquake
16. Draw the response graph of undamped free vibration SDOF system. Hence explain initial displacement, initial velocity, period and amplitude.
17. Derive the equation of motion and its solution for forced undamped 07 vibration system.
18. A SDOF vibrating system is having following parameters.m = 200 kg, k = 160

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
Department of Civil Engineering

N/m,  $c = 40 \text{ N} - \text{sec} / \text{m}$ . Determine (i) the damping factor (ii) the natural frequency of damped vibration (iii) logarithmic decrement (iv) the ratio of two successive amplitudes & (v) the number of cycles after which the original amplitude is reduced to 50%.

19. Plan and elevation of a four-storey reinforced concrete office building is shown in Fig. 1.1. The details of the building are as follows. Number of Storey = 4 Zone = III

Live Load =  $3 \text{ kN/m}^2$  Columns  
=  $450 \times 450 \text{ mm}$

Beams =  $250 \times 400 \text{ mm}$  Thickness of

Slab =  $150 \text{ mm}$  Thickness of Wall =

$120 \text{ mm}$  Importance factor =  $1.0$

Structure type = OMRF Building

Determine design seismic lateral load and storey shear force distribution.

20. Philosophy of Earthquake Resistant Design. Give four virtue of good earthquake resistant design
21. Effect of structural irregularities on the performance of RC building during earthquake

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
Department of Civil Engineering

**Assignment (Concrete Technology)**

**Assignment No 1**

1. Describe effect of impurities in water on properties of concrete.
2. Describe the procedure for determining standard consistency of cement.
3. Enlist the types of cement. Explain suitability of any three types.
4. Explain the role of aggregates in concrete. State the requirements of good aggregate.
5. Explain heat of hydration and its importance in setting time.
6. Enlist physical properties of cement. Explain setting time with neat sketch.
7. Enlist physical properties of aggregate. Explain any two.

**Assignment No 2**

8. Define placing of concrete and explain different methods of placing of concrete.
9. Differentiate slump test and compaction factor test to determine workability of concrete.
10. Explain importance of compaction of concrete. Explain methods of compaction.
11. What is segregation and bleeding? Explain their importance in concrete.
12. Explain any two methods, equipments and advantages of transportation of concrete.
13. Explain the steps of manufacturing of concrete. Explain any one.
14. Define workability. Explain factors affecting workability.
15. Enlist methods to measure workability of concrete. Explain procedure of any one.

**Assignment no 4**

16. Explain the factors affecting strength of concrete.
17. What is shrinkage of concrete? Explain types of shrinkage.
18. Explain modulus elasticity of concrete with neat sketch.
19. Explain creep of concrete in detail with neat sketch.
20. Explain the relation between the strength and water cement ration of concrete.
21. Explain characteristic strength, compressive strength and flexural strength of concrete.
22. Explain gelspace ratio.
23. Which are the factors affecting creep and shrinkage of concrete.
24. Explain NDT check concrete strength.

**Assignment no 5**

25. Explain the condition where following admixtures are used:
  - a. Superplasticizer
  - b. Accelerator
  - c. Fly ash
  - d. Silica flumes
26. Enlist various admixtures used in concrete. Explain any two.
27. Explain the effect of chemical admixture on fresh concrete.
28. Explain use of fly ash and metakaolin in fresh concrete with their advantages.

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
**Department of Civil Engineering**

29. Explain action of plasticizer.

**Assignment no 6**

30. Write a short note on

- a. Hot weather concreting
- b. High performance concrete
- c. PQC
- d. High density concrete
- e. Cold weather concrete
- f. High strength
- g. rete
- h. Ferrocement
- i. Vacuum dewatered concrete
- j. Roller compacted concrete

31. Explain how permeability affects the durability of concrete. Explain the factors affecting permeability of concrete.

32. Explain factors affecting durability of concrete? Why durability of concrete is important?

33. Explain the effect of W/C ratio on durability and permeability of concrete.

34. Explain the importance of minimum and maximum cement content on durability?

35. Explain causes of corrosion and remedial measure.

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
Department of Civil Engineering

**Tutorial (Theory of Structure)**

A) Explain in brief Degree of Kinematic & Static Indeterminacy

B) A propped cantilever beam AB, fixed at A and simply supported at B, L m long, is subjected to a udl of  $w$  kN/m throughout its length. Analyze the beam, draw SFD. Use Consistent Deformation method. Take EI constant

C) Fixed Beam AB, 10m span is subjected to a point Load  $P=20$  KN at its centre, Analyse the beam RB & Mb are redundant draw SFD & BMD. Use Consistent Deformation method. Take EI constant.

D) Difference between Determinate Structure and indeterminate Structure .

E) Explain in brief Degree of Kinematic & Static Indeterminacy

A two span continuous beam ABC has span AB of 6 m and Span BC of 4 m. End A is fixed while end C of the beam is simply supported. Span AB carries through u.d.l of 20 kN/m and BC carries central point load 40kN. Span AB has its inertia double that of span BC. Analyse the beam using slope deflection method. Draw BMD.

Analyze the two span continuous beam ABC in which  $AB=BC=4$ m, is fixed at A and C, simply supported at B, UDL of 20kN/m is placed throughout. Use three moment theorem. Draw BMD. Take  $EI=10^6$  kN/m<sup>2</sup>.

Analyze the continuous beam ABCD, simply supported at A, B, C and D, with span  $AB=4$ m ( $2EI$ ),  $BC=3$ m ( $1.5EI$ ) and  $CD=3$ m ( $EI$ ). Span AB is subjected to udl of 4kN/m throughout, span BC to a central anti-clockwise couple of 15kNm and span CD supports a central point load of 10kN. Draw BMD for the beam. Also determine the bending moment anywhere in the beam.

Using slope Deflection Equation

- State & Prove Clapeyron theorem of three moment equation in general with varying M.I & level difference between the supports.
- Explain non sway type of portal frame with diagram

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
Department of Civil Engineering

**Assignment (Water Resources Engineering II)**

Chapter 1:

1. Explain with a neat sketch different storage zones in a reservoir.
2. Define and explain; Dead Storage, Live Storage, Carryover Allowance, Full Reservoir Level, Highest Flood Level
3. What is silting of reservoirs? What factors influence it?
4. Explain in detail the components and functions of Earthen dams
5. Describe in detail the design criteria for an Earthen Dam.
6. Describe in detail the component parts of the Earthen dam. Draw its neat sketch. Explain their functions.
7. Describe in detail the design criteria for an Earthen Dam.
8. Describe in detail modes of failures in Earthen dams. Explain hydraulic failure in detail.
9. Describe with a neat sketch the phreatic line in earthen dam and give its characteristics.
10. Enlist the types of dams with neat sketches. Explain their suitability.
11. Which investigations are required for reservoir planning? Explain them in detail.
12. Describe the Indian Standard norms for fixing the control levels of a dam.
13. Explain the important points that govern the selection of site for concrete dam.
14. Describe area capacity curve in detail with its importance in reservoir planning

Chapter 2:

1. Explain in detail various forces acting on a dam
2. Define and describe in detail with a neat sketch the elementary profile and practical profile of a gravity dam.
3. Discuss step by step the analytical procedure that you will adopt for analyzing the stability of gravity dam.
4. Discuss the Instrumentation in dams and need for the same
5. Discuss the Instrumentation in dams and need for the same

Chapter 3:

1. Describe selection criteria of spillways.
2. What are the essential requirements of the spillway? How would you select a suitable site for the spillway?
3. Classify the spillways. Describe any one in detail.

Dr.J.J.Magdum Trust's  
Dr.J.J.Magdum College of Engineering, Jaysingpur  
Department of Civil Engineering

4. Enlist various types of spillways and explain chute spillway in detail.

Chapter 4:

1. Write down about the components of Diversion Head Work
2. Note down the causes of failure of weirs on permeable foundation.
3. Explain Bligh's creep theory in detail.
4. What do you know by piping in hydraulic structures? What are its ill effects?
5. Define exit gradient. Explain its significance. How would you compute it?

Chapter 5:

1. Discuss the losses in canal
2. Classify different types of canal.
3. Compare between Kennedy's and Lacey's Theory
4. Discuss in detail selection criteria for canal lining
5. Write a note on CD work admitting drainage water into canal
6. Differentiate between aqueduct and super passage with their neat sketches
7. Explain various types of Canal falls
8. Explain Head and Cross Regulatory work with functions

Chapter 6 :

1. What are various stages of river? Give salient features of each stage.
2. Write in detail about Meandering- causes, factors controlling process and features.
3. What are the objectives of river training works? Explain any one river training work.
4. Describe the function of guide bank and explain about its length of waterway, length of guide bank and radius of curved heads.
5. Discuss groynes and its types
6. Explain the interlinking of rivers in detail.
7. Write a note on need of Interlinking of Rivers
8. Explain National Perspective Plan
9. Describe the superiority of hydropower on thermal power. {advantages of hydropower}
10. Enlist the component parts of hydropower station. Describe how electricity is generated
11. Explain the major components of Hydro Power Plant
12. Explain various types of surge tanks

# Compiler Construction

By S.A.Nardo

### Phase of compiler

- The compilation process contains the sequence of various phases.
- Each phase takes source program in one representation and produces output in another representation.
- Each phase takes input from its previous stage.

Thus we have phase of compilation

- Analysis (Machine Independent/Language dependent)
- Synthesis (Machine Dependent/Language Independent)

Compilation process is partitioned into no. of sub-processes called "Phase"

### Lexical analysis cont..

- To compile from source to additional notation or code.
- To compile to word analysis for tokens in the program to be run.

Example: `int i=10;`

1. The identifier `int`
2. The assignment operator `=`
3. The constant `10`
4. The semicolon `;`
5. The end of the line `\n`
6. The end of the program `^`
7. The end of file

Each lexical analysis is a sequence of these tokens which is ready to be used by the compiler.

### COMPILERS

- A compiler is a program takes a program written in a source language and translates it into an equivalent program in a target language.

```

graph LR
    A[Source program] --> B[Compiler]
    B --> C[Target program]
    B --> D[Error message]
  
```

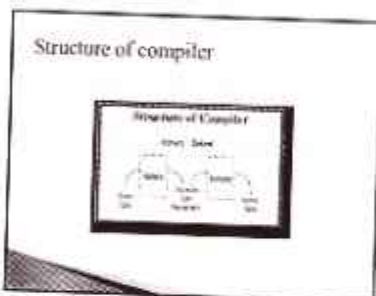

### Lexical analysis cont..

- A compiler that takes a source program and produces a target program.

Token	Value	Value
<code>int</code>	<code>int</code>	<code>int</code>
<code>=</code>	<code>=</code>	<code>=</code>
<code>10</code>	<code>10</code>	<code>10</code>
<code>;</code>	<code>;</code>	<code>;</code>
<code>\n</code>	<code>\n</code>	<code>\n</code>
<code>^</code>	<code>^</code>	<code>^</code>

- Token is a unit of analysis.

### Phase I: Lexical Analysis

- Lexical Analysis Phase:
- The lexical phase reads the characters in the source program and groups them into a stream of tokens in which each token represents a logically cohesive sequence of characters, such as, An identifier, A keyword, A punctuation element.
- The character sequence forming a token is called the lexeme for the token.

### Lexical analysis cont..

- A token is the smallest meaningful component in a program.
- Each token has a type and a value.
- For example:
  - The number `10` has type `int` and value `10`.
  - The keyword `int` has type `keyword` and value `int`.
  - The operator `=` has type `operator` and value `=`.

### Phase 2: Syntax Analysis

- **Syntax Analysis Phase:** Syntax analysis imposes a hierarchical structure on the token stream.
- This hierarchical structure is called **syntax tree**.
- A syntax tree has an **interior node** is a record with a field for the operator and two fields containing pointers to the records for the left and right children.
- A **leaf** is a record with two or more fields, one to identify the token at the leaf, and the other to record information about the token.

### Syntax Analysis cont.

- A syntax analyzer is called a **parser**.
- The parser receives a stream of tokens from the lexer.
- It groups them into phrases that match grammatical patterns.
- The parser outputs an **abstract syntax tree** representing the syntactical structure of the pattern.

### Syntax Analysis cont.

- The tokens  $m_1, m_2, m_3, \dots, m_n$  may be represented by the following tree.

### Phase 3: Semantic Analysis

- This phase checks the source program for semantic errors and gathers type information for the subsequent code-generation phase.
- It uses the hierarchical structure determined by the syntax-analysis phase to identify the operators and operands of expressions and statements.
- An important component of semantic analysis is **type checking**.

### Semantic Analysis cont.

- An **semantic analyzer** traverses the abstract syntax tree checking that each node is appropriate for its context.
- That is, it checks for semantic errors.
- It outputs a **refined abstract syntax tree**.

### Semantic Analysis cont.

- The tree may be **refined** to the tree.

### Phase 4: Intermediate code generation

- The **lexer and semantic analysis** generate a refined intermediate representation of the source program.
- The **intermediate representation** should have two important properties:
  - It should be **easy to produce**.
  - And **easy to translate** into target program.
- Intermediate representation can have a variety of forms.
- One of the forms is **three-address code**, which is the assembly language in a machine in which every location can act like a register.
- These address code consists of a sequence of **statements**, each of which has a **right-hand operand**.

### Intermediate code generator cont.

- An **intermediate code generator** receives the abstract syntax tree from the semantic analyzer.
- It outputs **intermediate code** that semantically corresponds to the abstract syntax tree.

### Intermediate code generation cont.

- The tree may be expressed in **intermediate code**.

### Intermediate code generator cont.,

- Intermediate code is code that represents the semantics of a program, but is machine-independent.
- This marks the boundary between the front end and the back end.
- The front end is language-specific and machine-independent.
- The back end is language-independent and machine-specific.

### Phase 5: Code Optimization

- **Code Optimization:** Code optimization phase attempts to improve the intermediate code, so that faster running machine code will result.
  - A program may be optimized for speed or for size.
  - An optimizer analyzes the code, looking for ways to reduce the number of operations, and the memory requirements.
  - Often there is a trade-off between speed and size.

### Code - optimized cont.

- The intermediate code in this example may be optimized.

### Phase 6: Code Generation

- **Code Generation:**
  - The final phase of the compiler is the generation of target code, consisting normally of its machine code or assembly code.
  - Memory locations are selected for each of the variables used by the program.
  - Thus, the each intermediate instruction is translated into a sequence of machine instructions that perform the same task.

- The code generator receives the (optimized) intermediate code.
- It produces either:
  - machine code for a specific machine, or
  - assembly code for a specific machine and assembler.
- If it produces assembly code, then an assembler is used to produce the machine code.

- The intermediate code may be translated to assembly code.

### Symbol Table Management

- **Symbol Table Management:** Symbol table is a data structure containing a record for each identifier, with fields for the attributes of the identifier. Record the identifier used in the source program and other information about the identifier such as:
  - its type, its scope and intermediate code;
  - its scope, its semantic and intermediate code;
  - storage allocation, (by code generator);
  - number of arguments and its type for procedure, the type returned.

### Error Detecting and Reporting

- Each phase encounters errors.
- Lexical phase determines the input that do not form tokens.
- Syntax phase determines the tokens that violate the syntax rules.
- Semantic phase detects the constructs that have no meaning to operand.

### Compiler-Construction tool

**Compiler - Construction Tool**

- These are specialized tools that have been developed for helping implement various phases of a compiler.
- These tools assist in the creation of an entire compiler or its parts.

**Parser Generator**

- **Parser Generator -**  
It produces syntax analyzers (parsers) from the input that is based on a grammatical description of programming language or on a context-free grammar.
- It is useful as the syntax analysis phase is highly complex and sometimes time-consuming and compilation time.
- Example: PCC, DGM

**Scanner Generator**

- **Scanner Generator -**  
It generates lexical analyzers from the input that consists of regular expression description based on tokens of a language. It generates a finite automaton to recognize the regular expressions.
- Example: Lex

**Syntax directed translation engines**

- **Syntax directed translation engines -**  
It generates intermediate code with three address format from the input that consists of a parse tree. These engines have routines to traverse the parse tree and thus produce the intermediate code.
- In this, each node of the parse tree is associated with one or more translations.

**Automatic code generators**

- **Automatic code generators -**  
It generates the machine language for a target machine. Each operation of the intermediate language is translated using a collection of rules and then is taken as an input by the code-generator. A template matching process is used. An intermediate language statement is replaced by its equivalent machine language statement using templates.

**Data-flow analysis engines**

- **Data-flow analysis engines** - It is used in code optimization. Data flow analysis is a key part of the code optimization that gathers the information, that is the values that flow from one part of a program to another.

**Cousin of the compiler**

**Preprocessor**

- A preprocessor is a program that processes its type data to produce output that is used as input to another program. The output is used as a preprocessed form of the input data, which is often used by some software programs like compilers.
- They may perform the following features:
  - Macro processing
  - File inclusion
  - Command Preprocessors
  - Language extension

**Macro processing**

- A macro is a rule or pattern that specifies how a certain input sequence should be mapped to an output sequence according to a defined procedure. The mapping process that instantiates a macro into a specific output sequence is known as macro expansion.
- macro definitions (`#define`, `#undef`) `#define` preprocessor macros we can use `#define`.
- Macro is a set of instruction which can be use repeatedly in the program
- `# define PI 3.14`

- Its format is `Identifier identifier replacement`
- When the preprocessor encounters this directive, it replaces any occurrence of identifier in the rest of the code by replacement. This replacement can be an expression, a statement, a block or simply anything. The preprocessor does not understand C++, it simply replaces any occurrence of identifier by replacement. `#define TABLE_SIZE 100` or `#define TABLE_SIZE 100`
- `#undef TABLE_SIZE`
- After the preprocessor has replaced `TABLE_SIZE`, the code becomes equivalent to an `int table[100];`
- `int table[100];`

**File inclusion**

- Preprocessor includes header files into the program text. When the preprocessor finds an `#include` directive it replaces it by the entire content of the specified file.
- There are two ways to specify a file to be included:
  - `#include "file"`
  - `#include <file>`

12/13/2023

- The only difference between both expressions is the paths (directories) where the compiler is going to look for the file. In the first case where the file name is specified between double-quotes, the file is searched first in the same directory that includes the file containing the directive. In case that it is not there, the compiler searches the file in the default directory where it is configured to look for the standard header files.

- If the file name is enclosed between angle-brackets (<>) the file is searched directly where the compiler is configured to look for the standard header files. Therefore, standard header files are usually included in angle brackets, while other specific header files are included using quotes.

#### Rational Preprocessors

- These processors change older languages with more modern flow-of-control and data-structuring facilities.
- For example, such a preprocessor might provide the user with built-in macros for constructs like while-statements or if-statements whose uses exist in the programming language itself.

#### Language extensions

- These processors attempt to add capabilities to the language by what amounts to built-in macros. For example, the language `SQL` is a database query language embedded in C.
- Statements logging with `AP` are taken by the preprocessor to be database access statements embedded in C and are translated into procedure calls or routines that perform the database access.

- The behavior of the compiler with respect to extensions is defined with the `-xextension` directive: `extension extension_name : behavior extension_name all : behavior`
- `extension_name` is the name of an extension. The `all` token all means that the specified behavior should apply to all extensions supported by the compiler.

#### Assembler

- An assembler creates object code by translating assembly instruction mnemonics into machine code. There are two types of assemblers:
- One-pass assemblers go through the source code once and assume that all symbols will be defined before any instruction that references them.
- Two-pass assemblers create a table with all symbols and their values in the first pass, and then use the table in a second pass to generate code.

- Typically a modern assembler creates object code by translating assembly instruction mnemonics into opcodes, and by resolving symbolic names for memory locations and other entities. The use of symbolic references is a key feature of assemblers, saving tedious calculations and manual address updates after program modifications. Most assemblers also include macro facilities for performing textual substitutions (e.g., to generate common short sequences of instructions in place, instead of calling subroutines, or even generate entire programs or program units).

- The advantage of a one-pass assembler is speed, which is not as important as it once was with advances in computer speed and capabilities. The advantage of the two-pass assembler is that symbols can be defined anywhere in the program stream. As a result, the program can be defined in a more logical and meaningful way. This makes two-pass assemblers preferred over one-pass assemblers.

#### Linker

- A linker or `ld` utility links programs that have been created using object code into a complete executable program.
- There are two types of linker:
- Static linker: It links the program to find library routines used by program, e.g. `printf`, `scanf` routines.
- Dynamic linker: It creates libraries that can be used and modified without changing the program or its dependencies, allowing greater flexibility.
- Resolves references among files.

- All operating systems that support program loading have loaders, apart from systems where code executes directly from ROM or in the case of highly specialized computers systems that only have a fixed set of specialised programs.
- In many operating systems the loader is permanently resident in memory, although some operating systems that support virtual memory may allow the loader to be located in a region of memory that is paged.

- In the case of operating systems that support virtual memory, the loader may not actually copy the contents of executable files into memory, but rather may simply declare to the virtual memory subsystem that there is a mapping between a region of memory allocated to contain the running program's code and the contents of the executable executable file.
- The virtual memory subsystem is then made aware that pages with that region of memory need to be filled on demand if and when program execution actually into those areas of virtual memory. This may occur prior to a program's code are not actually copied into memory and they are actually used, and unused code may never be loaded into memory at all.

### loader

- A loader is the part of an operating system that is responsible for loading programs in memory, one of the essential stages in the process of starting a program.
- Loading a program involves reading the contents of executable file, the file containing the program text, into memory, and then carrying out other required preparatory tasks to prepare the executable for running. Once loading is complete, the operating system starts the program by passing control to the loaded program code.

- Steps for loaders:
  - Read executable file's header to determine the size of text and data segments
  - Create a new address space for the program
  - Copies instructions and data into address space
  - Copies arguments passed to the program on the stack
  - Initializes the machine registers including the stack ptr
  - Jumps to a startup routine that copies the program's arguments from the stack to registers and calls the program's main routine.

# Thank you for learning with NPTEL!!

2023-06-05

Dear learner,

Thank you for taking the course with NPTEL!!  
 Hope you enjoyed the journey with us.  
 The results for this course have been published and we are closing this course now.  
 You will still have access to the contents and assignments of this course, if you click on the course name from the "My courses" tab on [swayam.gov.in](https://swayam.gov.in).

For any further queries please write to [support@npTEL-idea.ac.in](mailto:support@npTEL-idea.ac.in)

Mrs. Vinayashree Akkalkot  
Director Domain Computers,  
Sangli

Subject: Regarding permission to visit Domain computers Sangli.

Respected Madam,

Our institute Dr.J.J.Magdum College of Engineering Jaysingpur Dist: Kolhapur is leading educational institute offering four year degree courses in different engineering streams.

Department of CSE is planning for industrial visit for second year students as an academic part related to their syllabus. Students have subject Java Programming and for the same students require some practical knowledge about same subject.

For same we wish to visit Domain Computers, Sangli to see working environment & practical approach and to know new technologies used. We expect you will guide our students

For betterment of their knowledge & career.

Details:

College Name: Dr.J.J.Magdum College of Engineering Jaysingpur Dist: Kolhapur.

College Website: www.jjmcoe.ac.in

Number of students for visit: 72 Students & 3 Faculty members.

Expected Date of Visit: 19 Nov 2022

Time: 11:00AM at visit place.

So please allow us to visit Domain computers Sangli.

Thanking you.

## COMPLETION CERTIFICATE

Date: 26 Sep 2022.

### TO WHOM IT MAY CONCERN

It is our pleasure to write about Miss. Sonali Bhimrao Mohite. she has worked with Tecspeak IT Solutions as Trainee Software Developer from 2. 08/2022 to 26/09/2022 you will report to Miss. Asmita Shinde, Project Manager.

During the mentioned tenure of her work here, Sonali Bhimrao Mohite. Remained involved in her work with determination and sincerity. We found her active and competent in executing all assigned tasks. She is professionally sound, hard-working, and a devoted and motivated employee whose dedication in taking initiative and contribution for the realization of organizational goals and objectives has proven helpful in the advancement of our establishment repeatedly. Her decision to terminate her services with us is solely her own and we wish her all the best in her future endeavors.

Sincerely,

MANAGER

RICT014385

# Rachita Infotech

This is to certificate that, **Siddhi Shrirang Kundale** Student of  
DR. J J Magdum College Of Engineering ( B.Tech CSE ) successfully completed  
industrial training on Web development from period 22/08/22 to 15/10/22 , the  
training consisted of basics Of Web development. During the period of training  
programme with us, we found him/her punctual,hardwarking and inquisitive.

Grade: A

Date: 15/10/22

**AJAY JADHAV**  
Managing Director

This certificate can be can be verified at <https://www.rachitainfotech.in>

## COMPLETION CERTIFICATE

Centre Head,  
Aviatrix, Netherland.

Subject: Regarding Thanking.

Respected Sir,

As per our request, you accepted our invitation as a resource person for the One Day Workshop on "Recent Trends in Cloud Computing" under Augmentation Cell. The sessions was scheduled on Tuesday, 20/12/2022 at 09:30am.

On behalf of Augmentation cell from department of Computer Science & Engineering, we are thankful that you have given your precious time and effective content for students through these sessions.

You delivered the sessions very well.

Thank you.

  
Prof. S.S. Satpute

**Subject:** Invitation as a resource person for one day Technical Workshop on "Recent Trends in Cloud Computing" under Augmentation Cell

Respected Sir,

We, department of Computer Science & Engineering organized one day Technical Workshop on "Recent Trends in Cloud Computing" under Augmentation Cell for the students of SY and TY CSE. We are pleased to invite you a resource person for the session on Tuesday, 20/12/2022 at 09:30am.

Please kindly accept the request.

Thank you.

The modern age of technology in which most of the customer needs to wait in the supermarket for shopping because it is a highly time-consuming process. A huge crowd in the supermarket at the time of discount offers or weekends makes trouble to wait in long queues because of billing process. Looking at the today's conditions the contactless system has a huge need in society. The lesser we make contact it will be more beneficial for the health. This project proposes the same objective to make the shopping contactless.

In this project we designed the system which will make the bill automatically and also has a contactless payment method. The project is based on raspberry pi. The raspberry pi with load cell, sensors and motors are integrated with trolley. The trolley has a barcode scanning system. When user wants to put product in trolley, customer has to scan the product. Motors are used to open the trolley door to put products inside it when the product is scanned. The weight sensor calculates the added weight and compares it with the weight of product saved at the database. If it didn't match it will trigger the shop owner or lock the trolley. When the product is scanned the amount of product is added to that specific trolley bill. When the shopping is over it will generate a bill and send it on the app designed for this system. Then in that app user can make payment using the app wallet and complete the transaction. After the payment the trolley door will be open and user can collect all his goods.

**Figure 1** is a Front View of an "AUTOMATIC BILLING TROLLEY" of our new design;

**Figure 2** is a Rear View thereof;

Date: 24-03-2023

To,  
**Mr. Vaibhav V. Sutar,**  
 Director, Vishva Technologies,  
 Kolhapur.

**Subject: Invitation Letter**

Respected sir,

We are pleased to have the honor of inviting you to deliver a guest lecture at Department of Computer Science and engineering. Topic for this lecture will be "Introduction to Python" and will be for SY (CSE) class.

**Venue:**

**Place: Classroom 201**

**Day and Date: 27 th March 2023**

**Time: 10.00am to 12.00 noon.**

Taking into account your interest and expertise in this field, we hope to welcome you soon at the venue of this guest lecture.

So please accept our invitation and do the needful.

Thanking you,

With warm regards,

  
**Mrs. A. V. Gundavale**  
 Guest Lecture Co-ordinator

  
**Dr. Mrs. D. A. Nikam**  
 HOD CSE

Dr. J. J. Magdum Trust's  
**Dr. J. J. Magdum College of Engineering, Jaysingpur.**  
Department of Computer Science and Engineering

Date: 27-03-2023

To,  
**Mr. Vaibhav V. Sutar,**  
**Director, Vishva Technologies,**  
**Kolhapur**

Respected Sir,

Thank you very much for delivering an informative and thought provoking lecture on  
 "Introduction to Python" at Computer Science and Engineering department.

All the students appreciated and got benefited from your expert knowledge of the subject.

Looking forward for your cooperation in future as well.

Thanking you,  
 With warm Regards,

*(Handwritten signature)*

Mrs. A. V. Gundavade  
 Guest Lecture Co-ordinator

*(Handwritten signature)*

Dr. Mrs. D. A. Nikam  
 HOD CSE

# Unit Test No. 1

Based on Unit 1 from E-commerce and Digital Marketing

\* Indicates required question

1. Email \*

2. Enter your Roll No.:

3. Enter your Name: \*

4. Your Branch???

Mark only one oval.

- Computer Science and Engineering.
- Information Technology.

Go to question 5

Attempt the following questions.

Test contains 20 questions with one mark for each correct answer

5. Which term represents a count of the number of people who visit one site, click on the ad, and are taken to the site of the advertiser? 1 point

Mark only one oval.

- Affiliate programs
- Click-through
- C. Spam
- All of the above

6. What encourages users of a product or service supplied by a B2C company to ask friends to join in as well? 1 point

Mark only one oval.

- Spam
- Viral marketing
- Affiliate programs
- None of the above

7. Compared to B2C e-commerce, B2B e-commerce is ..... 1 point

Mark only one oval.

- of equal size
- slightly smaller
- slightly larger
- much larger

8. In the e-commerce security environment, which of the following constitutes the inner-most layer? 1 point

Mark only one oval.

- people
- data
- technology solutions
- organizational policies and procedures

11. All of the following are advantages of using an intranet Except 1 point

Mark only one oval.

- cross-platform capability
- security restrictions so employees cannot access the company network from home
- open standards
- reduced hardware and software costs

The digital product delivery internet business model

Mark only one oval.

- concentrates information about products and services from multiple providers at one central point.
- provides an electronic clearinghouse for products where price and availability are constantly changing, sometimes in response to customer actions.
- enables groups of people who want to purchase a particular product to sign up and then seek a volume discount from vendors.
- sells and delivers software, multimedia, and other digital products over the Internet.

12. A person to person payment system \_\_\_\_\_ 1 point

Mark only one oval.

- supports electronic payment for online and physical store purchases of goods or services after the purchase has taken place.
- Sends money using the web to individuals who are not setup to accept credit card payments.
- refers to digital currency that can be used for micro-payments.
- provides secure services for credit card payments on the internet

10. In Electronic cash payment \_\_\_\_\_ 1 point

Mark only one oval.

- a debit card payment system is used
- a customer buys several electronic coins which are digitally signed by coin issuing bank
- a credit card payment system is used
- RSA cryptography is used in the transactions

13. What is the name of the card which can be used by the buyers during the time of purchase and in which the amount will be immediately debited from the buyers account? 1 point

Mark only one oval.

- E-Distributor
- Debit Card
- Credit Card
- Power Card

14. Which of the following is not considered to be a drawback of Internet auctions? 1 point

Mark only one oval.

- Market inefficiency
- Trust risks
- Fulfillment costs
- Delayed consumption costs

17. Which of the following is not one of the benefits of e-commerce to sellers? 1 point

Mark only one oval.

- Face-to-face offers greater flexibility in meeting customer needs.
- Face-to-face is a powerful tool for customer relationship building.
- E-commerce can help to reduce costs.
- E-commerce increases the net cost per contact.

15. Set of independent Electronic Stores can be generally labeled as \_\_\_\_\_ 1 point

Mark only one oval.

- Electronic Shopping Mall
- Electronic Water
- Electronic Stores
- Generalized Stores

18. Electronic bill payment \_\_\_\_\_ 1 point

Mark only one oval.

- Supports electronic payment for online and physical store purchases of goods or services after the purchase has taken place.
- Sends money using the web to individuals who are not set up to accept credit card payments.
- Refers to the digital currency that can be used for micro-payments.
- Provides secure services for credit card payments on the Internet.

16. Which of the following describes e-commerce? 1 point

Mark only one oval.

- Buying products from each other
- Buying services from each other
- Selling service from each other
- All of the above

19. Digital products are best suited for B2C e-commerce because they \_\_\_\_\_ 1 point

Mark only one oval.

- Are commodity-like products
- Can be mass-customized and personalized
- Can be delivered at the time of purchase
- All of the above

20. Which products are people most likely to be more uncomfortable buying on the Internet? 1 point

Mark only one oval.

- Books
- Furniture
- Movies
- All of the above

23. What is the process in which a buyer posts its interest in buying a certain quantity of items, and sellers compete for the business by submitting successively lower bids until there is only one seller left? 1 point

Mark only one oval.

- B2B marketplace
- Intraad
- Reverse auction
- Internet

21. Digital products are best suited for B2C e-commerce because they \_\_\_\_\_ 1 point

Mark only one oval.

- Are commodity-like products
- Can be mass-customized and personalized
- Can be delivered at the time of purchase
- All of the above

24. A business cannot be all things to all people. Instead, a business must \_\_\_\_\_ 1 point

Mark only one oval.

- Identify target customers
- Identify the value of products/services as perceived by customers
- all of the above
- None of the above

22. Which is a function of E-commerce? 1 point

Mark only one oval.

- Marketing
- Advertising
- Warehousing

3JMCOE

Course Outcome

PCC-CSS07 Java Programming [Theory] Regular

CO ID	Course Outcome
CO1	Students will be able to articulate the principle of object-oriented programming & programming.
CO2	Students will be able to illustrate code reusability, security and abstraction using inheritance, package and interface.
CO3	Students will be able to develop reliable and user-friendly applications using exception handling and file handling.
CO4	Students will be able to create desktop apps using SWING and event handling and also illustrate multithreading concepts.
CO5	Students will be able to use JDBC & collection framework.
CO6	Students will be able to apply network programming concept & develop web applications using servlet and jsp.

PCC-CSS01 Information Security [Theory] Regular

CO ID	Course Outcome
1	To understand basics of the security concepts.
2	To expose the various security techniques.
3	To give hands on exposure to various Security algorithms.

PCC-CSS01 Information Security [Practical] Regular

Software Services

## Key Features of Cloud based College ERP Software

- ❑ Admission Management
- ❑ Fee Management
- ❑ Student Management
- ❑ Course Management
- ❑ Attendance Management
- ❑ Feedback Management
- ❑ Employee Management
- ❑ Inventory Management
- ❑ Library Management
- ❑ Examination Management

Cloud-Based ERP

DR. JYOTI PRASAD COLLEGE OF ENGINEERING

### Admission Management

- This is one of the features of ERP that guarantees that the admissions process is completed quickly and efficiently.
- Data for official records and reports can be easily retrieved and processed. Students can be registered online, applications can be verified and shortlisted online, and admission forms and fees can be sent online.

### Fee Management

- With this one of the features of ERP, creating trackers of how many students paid their fees on time, the manner of payment, scholarships received by students, outstanding fees, generating fee challans, and so on would be just a piece of cake.
- Fee Management feature aids in the collection of fees on campus and provides parents with useful reports and timely alerts.

### Student Management

- Maintaining records such as personal information, including images of students, previous institute information, birth, and other educational certificates, admission in which streams and standards, and so on would no longer be a time-consuming effort.

### Library Management

- All library-related actions, such as searching for books, finding them, then issuing and tracking, and so on, are handled by the library management feature.

### Examination Management

- This is one of the most important features of ERP that aids in the creation of examination calendars as well as the management of exam notifications. Students' grade book reports are created using the examination details.

### Attendance Management

The ability to track attendance, both for staff and kids is one of the major features of ERP. This makes it easier to keep track of the pupils present in the institute and ensures that attendance is maintained. This feature makes the tedious task of taking a roll call for the pupils much easier.

### Inventory Management

Inadequate inventory management causes inappropriate allocation of goods. This feature manages the college's purchase orders, goods invoicing, stock management, and equipment, creates comprehensive asset reports.

### Employee Management

Staff must be managed in the same way that students are. Everything from their attendance to their remuneration is included in this. It's difficult to manage an educational institution's entire staff, so using this feature to release salaries and other charges is a good idea.

## Online Quiz Report

Department of Computer Science & Engineering				
Online Quiz Report				
Class: SYCSE				
Course Name	Type	Faculty Assigned	No. of Exams	Total Assigned (Submission Count)
Data Structures	Regular	Sneha Satpute	2	0177 (0   76)
Applied Mathematics	Regular	Deelip Unde	1	077 (69)
& Structures	Regular	Snehal Farande	1	077 (75)
Computer Networks-I	Regular	Prachi Pathak	1	077 (73)
Microprocessors	Regular	Shruti Narde	0	

# Online Feedback Report

Sr. No.	Faculty Name	Branch/Department	Semester/Group	Feedback Title	Attendees	Performance (%)	Remark	Average (%)
1	ROHIT MANE	Computer Engineering	BE	Artificial Intelligence (ELECTIVE)- B.Tech	26 / 83	96.18	Excellent	96.18
2	ARCHANA GONDARJIE	Computer Engineering	BE	Advanced Database Systems B.Tech	33 / 83	98.37	Excellent	98.37
3	Pavan Kulkarni	Computer Engineering	BE	Web Technologies B.Tech	29 / 83	98.00	Excellent	98.00
4	Pavan Purohit	Computer Engineering	BE	B.Tech	25 / 83	96.28	Excellent	96.28
5	Shachi Parande	Computer Engineering	BE	Cloud Computing B.Tech	25 / 83	93.60	Excellent	93.60
6	Prashant Kulkarni	Computer Engineering	BE	Advanced computer architecture B.Tech	26 / 83	94.54	Excellent	94.54
